is County Republicanism and East Jordan always staunch in party polltics, will have a goodly delegation at Charlevoix, Tuesday night.

The voters of Mason county upon whom responsibility rests for the existence of saloons, through their action of two years ago in defeating local option have had several reasons to seriously consider their action since it was taken. The saloons would be "regplated and restrained" they assured themselves and others if local option was defeated Yet there never has been a period in the history of Mason county when the saloons were more flagrant and disgraceful in their violation of law and so notoriously hurtful to the county and its people than during the past two years. The murder of Edward Johnson by Charles Rush in a Custer saloon, the second murder duits saloon surroundings committed in that county within the past two years, is a crime that would not have occurred had local option been adopted in Mason county. It has become true that the saloon is so closely associated with disgrace and crime that * vote in favor of retaining it includes responsibility for its career and its dreadful toll of misery and suffering. It will not be necessary to have local option speeches made in Mason county when that question is next submitted there. What the saloou has done and is doing what it costs to maintain it byterian church and interment was in use of laxative to keep the bowels in and what it gives for the investment the Fredonia cemetery. made, are questions which the people of Mason county can promptly and at East Jordan and in Fredonia. atfully answer for themselves.

DEPENDON Hosiery and Underwear for the Entire Family

HOSIERY

UNDERWEAR

is unequalled for every member of the family. Dependon is so well made it has to last long—the most carefully knit, the most flexible, the most comfortable underwear and hosiery you can find. Dependon means just what the name implies—perfect reliability in underwear and hosiery—unequivocal goodness. One trial will convince you of its economical desirability. From 50c to \$3.00 the garment.

Dependon Hosiery

satisfies every hosiery need. For children, ultra-durable Dependon stockings are good stockings. The linen spliced toes and heels resist hard knocks—withstand them so successfully that your weekly darning is appreciably reduced. Dependon hosiery for women is an unexcelled combination of fineness, durability and shapeliness. Men, too, enjoy the sturdy worth of Dependon. All prices in meu's, women's and children's hose, from 15 cents up.

"OUALITY FIRST OF ALL."

Charlevoix County Herald

G. A. LISK, Publisher.

BEING A GOOD FELLOW.

Every now and then we hear of some one dying in bitter poverty after having spent a fortune in "being a good fellow." Of such a one it is commonly said while he is alive and spending that he has a "heart like an ox and a hand always deep in his pocket;" he is spoken of-frequently within his own hearing—as a "prince among men" or "one of nature's noblemen." It seems passing strange that a man with the power to attract to himself so many warm friends should not have any willing to pay his funeral expenses, says the New York Herald. Yet such is often the case. It is a fact frequently commented on by philosophers that these peerages of case creation die with the fortunes among men" or "nature's nobleman" loses his title when his money ceases to burn holes in his pocket, after which he should set aside a little money for his own obsequies. But those who argue from the forlorn and friendless passing of one of these "good fellows" that there are no real friends to be had in this world are wrong. Every one can make friends, and stanch ones, too, by the practice of unselfishness, but not by wasting money on the worthless in the vain hope of being considered a "good fellow," which is merely another name for a complete fool.

There's a new health-fad, blowing soap bubbles. A New Yorker who has just returned from a vacation trip to the villages there a number of people, base slander. young, middle-aged and elderly, with clay pipes and glasses of suds, vying with one another in the childish pastime. Narrating his experience to a one resident if the place had become a retreat for the mildly insane, and he told me that they were all people who had-or thought they had-weak lungs. A doctor from New York was up there last winter and introduced soap-bubble blowing as one of the aids In the cure of consumption. It makes the patients breathe deeply." It is plausible as many another therapeutic novelty, and certainly no harm can

A little while ago there was some amusement because two American women had married Frenchmen claiming to be able to give them the title of Duchess of Choiseul, and each questioned the right of the other to the title. Now there will be more amusement. Litigation has brought out the fact that it belongs to neither of them, though the husband of cas of them, formerly Mrs. Paine, is the seventh Duke of Praslin.

The cable says of two Hungarian statesmen who engaged in a duel the other day that "both were wounded in the fifth bout." Usually they get scratched on their right arms.

Luther Burbank is on the wrong track in working to evolve a seedless watermelon. Picking out the seeds keeps people from eating the watermelon faster than they should.

We are told that King Manuel is taking great interest in the efforts of throne. If the young man does not have a care he will overwork himself.

The claim that one of those French aviators made 155 miles an hour must swait verification. It may be true, but an official statement would inspire more ready belief.

Former Senator Clark of Montana has had a \$125,000 pipe organ placed in his New York house, but he does not as yet seem to have bought any golden cuspidors.

A New York physician advocates the placing of enormous traps at the street corners to catch flies. Why not make 'em big enough to take in the corner loafers?

Cotton suits are to be made for King George and President Tait out of the season's first bale, but the recipients will not be forced to wear

It has been decided by a Massachus etts judge that a man is the boss in his own home. Now all that a man has to do is to enforce the decision.

One of the aviators succeeded in once is more haystacks.

The Minnesota Agricultural School intends to teach farming to clergymen. This is one means of sending forth laborers into the harvest.

New York should swat the cholers germ even if it has to overlook the house-fly and the mosquito.

Meddling Men

Sure Way of Success Is Mind Own Business

By REV. MADISON C. PETERS

HE busybody is a self-appointed inspector of social warts, a sort of supervisor of other people's domestic affairs, for the busybody generally begins by reporting domestic infelicities.

From the frequency with which the Bible speaks of these people I take it that they may be considered the worst foes of society. Women generally get the credit for all the busybodying; but the men are as bad blabs as the women. Indeed, many women have become so useful to the community that they have retired from the gossiping business, and babbling, tattling, sly-whispering and impertinent meddling men have

succeeded them and are trespassing constantly on the community with The busybody is remarkable for his health. He can live on anything;

that produce them. A real "prince he usually carries with him a bag of reputations made up in cold hash so that he doesn't have to stop for meals. He has long legs and can go a thousand miles at a jump, while he has great genius for smelling. His peculiarity is acuteness of ear, for he can hear as much through a keyhole as from a door wide open.

When Commodore Vanderbilt was asked how he made so much money, he said he made half of it by minding his own business and the other half by not minding other people's business.

The reason why men succeed who mind their own business is because there is so little competition. There are many people so busy minding other people's business that I wouldn't be a bit surprised in the resurrection day to see some of these everlasting snoops getting out of the wrong

Without any intention, perhaps, of doing injury to your neighbor, a careless remark may be seized by a babbler, and as a snowball grows by rolling it, so does a story by telling; it passes through the babbling tribe, growing larger and larger, and darker and darker, and by the time it has the Saranac lake region saw in one of rolled through Babbletown it has assumed the magnitude and blackness of

Philip de Neri was visited by a woman, who accused herself of slander. He bade her go to the market, buy a chicken just killed and still covered with feathers and walk a certain distance, plucking the bird as reporter, he exclaimed: "I inquired of she went. The woman did as she was directed and returned, anxious to

know the meaning of the injunction. "Retrace your steps," said Philip, "and gather up, one by one, all the feathers you have scattered." "I cast the feathers carelessly away," said the woman, "and the wind carried them in all directions."

"Well, my child," said Philip, "so it is with your vords of slander; like the feathers which the wind has scattered, they have been wafted in many directin several of the French provinces in tions. Call them back now if you can. Go, sin no

By ANNIE G. MURRAY

It is undoubtedly true that the sense of parental responsibility is diminishing rather than increasing. Numerous conditions are combining to encourage this spirit, and these conditions may be detected in some of the institutions of which America is so proud, notably in the public schools. I do not believe that any teacher can take the place of a parent, or that any school can be a good substitute for the home.

Kindergarten instruction in the public schools has produced its benefits, but the principle has been extended so that it sometimes has included, unintentionally, no

doubt, practically the entire care through the day of children who are hardly more than infants. The authority and affection of the home are in some measure super-

seded by those of the school, and it is well known that parents are tempted to take advantage of the kindergarten system to shirk parental responsi-

For children of tender years the home influence, if it embraces what the royalists to place him back on the can be called a home, should be the controlling factor in instilling family love and unselfishness.

The old-fashioned child over whom parental authority was exercised much more effectively was quite as bright and good as the new-fashioned child for whom discipline has been so universally relaxed.

It is a hopeless plan to attempt to improve the mind or the moral nature of children under ten years of age by placing them in what prac-

tically are prisons. The home is the only natural place for the child, and our efforts ought to be directed to making it in Annie G. Murray

Teach Children Beauty

all cases the fittest place.

By William F. Curtis, Jr.

Flowers

of the

Children should never be allowed to pluck flowers, even in the field and hedges, merely to throw them aside; they should be early taught reverence for this floral beauty which is around them and never be permitted wantonly to break down boughs and branches, or fill their laps with buttercups and daisies only to leave them withered in the sun, discarded and forgotten.

The young should cherish their flowers as wisely as, and more tenderly than, they cherish their gold or silver pieces in their money boxes. The exquisite beauty of even the humblest blossom can only be ap-

ciated by the eyes which gaze on it with attention and affection. If the saving his life by failing on a hay wild thyme, or the shepherd's purse, or the cuckoo's eye, or any one of the stack. What this country needs at tiny blossoms of the sward and hedgerow were but as rare as sapphires are, the whole world would quarrel for them; but nature has sown these little treasures broadcast with lavish hand, and scarcely any one is grateful.

The garden is a little pleasure of the soul, by whose wicket the world can be shut out from us. In the garden something of the golden age still lingers; in the warm alleys where the bees hum about the lilies and the stocks, and also where the lime leaves and the scacia flowers wave joyously as the west wind passes.

A true lover of a garden counts time and season by his flowers.

SOMIE HOT WAYIES. OF THE PAST 98

A TEMPORARY REFUGE FROM THE HEAT WOMEN'S BATHING HOUR.

ilar and it would seem even more disastrous predecssors, and in delving into the records of the past the somewhat surprising fact is disclosed that the old world has suffered much more than the new.

In the years 1303-4 the Rhine, Loire and Seine rivers went dry. The heat 1705 was equal to that of a glass furnace. Meat could be prepared for the table by merely exposing it to the sun. No person dared to venture out of his house between the hour of noon and 4 p. m.

In the year 1718 many shops had to close all over Europe. Not a drop of rain fell for four months. In 1773 the thermometer rose to 118 degrees. In 1778 the heat in Bologna was so intense that scores of people were

In July, 1793, the heat again became intolerable. Vegetables were burned up and fruit dried on the trees. The furniture and woodwork in dwelling houses cracked and split and meat became tainted in an hour. The French revolution was then at the height of its bloody carnival, and many superstitious persons thought that the wave of heat following this mighty upheaval was the curse of God.

In 1800 Spain was visited by a sweltering temperature. Madrid and other cities were deserted and the streets became silent.

Another disastrous hot wave swept over Europe in 1851. In the Champs de Mars, Paris, during a military review, soldiers by the score fell victims to sunstroke, and at Aldershot, England, men dropped dead while at drill, compelling the officers to suspend the exercises.

In This Country.

The symmer of 1853 was exceptionally hot in many parts of this country and in New York the thermometer ranged for seven days from 95 to 98 degrees. In one week 214 persons died of sunstroke in the metropolis. The year 1854 was hot and dry and the heat seemed to concentrate in the southwest. In Missouri from June 17 to the following year not a drop of had never before witnessed. rain fell. In 1872 New York experienced a torrid visitation of fearful intensity. On July 4, 155 cases of in constant requisition. Dumb beasts lay down by the wayside and panted their lives away. Sleep for two or three of the hottest nights was wellognition of friends or relatives.

Thought the End Had Come. In 1881 it is said the heat through.

out the United States was the greatest on record, the thermometer in cacy. Old methods must give away to new medical science moves. I know what in the shade. In England the mer everywhere. I know what they will do through July and August into September. In Richmond the thermometer registered 105 degrees; in Washington 104; in Baltimore, Wilmington, Philadelphia, Rochester and elsewhere from 99 to 100; yet on September 7 snow fell in Deadwood, S. D., to the depth of five inches, and at Bald mountain the snow was two feet deep. During the month of September the thermometer in places registered as high as 106 degrees and great forest fires broke out and raged in different parts of the country. On September 7 a day of darkness broke over the country, being worse over the New England states, and the superstitious were badly frightened. The Connecticut legislature, in a belief-that the end of the world was approaching, adjourned. A strange greenish-yellow pall overspread the heavens, and so darkened the light of the sun that lamps and gas were lighted, schools and factories closed, and multitudes of the ignorant and superstitious believed that the day of judgment had

Everything looked changed and unnatural. The faces of the people on the street were ghastly, the gas jets in the stores, instead of showing yellow, were as white and clear as electric lights, and thousands of the sect known as the Second Adventists gathered in their places of worship and confidently awaited the appearance of the Lord. The dark day was more wonderful in the country. The leaves and withering foliage assumed a most singular tint of green, changing like that of grass to a brownish hue; fowls went to roost, and the animal creation must have been greatly mystified by a phenomenon such as they

A curious feature of this luminous haze was that it cast no shadow. It was as light under the trees as away sunstroke occurred and of these 72 from them, the whole unnatural apfares were like fields of battle. NEW RIBBONS FOR MILLINERY

They Are Very Wide and Soft, Designed for the Making of Hat Bows.

The new millinery ribbons are enormously wide and soft, for bows made of taffeta are really smarter than ribbon, and the ribbon makers have had to get out special widths to please the women who prefer to make big hat however, and the verdict was "not bows of conveniently finished ribbon rather than hem and wire silk bows. The graceful bows are arranged at front, back or side of the hat, according to the requirement of its shape or its wearer's fancy. The big bow across the back is undeniably youthful and girlish in suggestion, though the bow in front is more becoming to certain types of face. Trimming at the side should only be worn by women who can stand dashing and jaunty effects.

Taffeta is the millinery silk par excellence just now, and the new colors are delectable-soft gray reds called raspherry and cyclamen, rich olive and bronze greens; a sumptuous American beauty rose and several shades of the vivid geranium red called "coronation." There are two tone silks with jacquard weaves which make stunning bows, the velvet brim facing of velvet matching one of the shades; but perhaps the most beautiful of all the new millinery siiks Teeth kept clean mean small den- is the beau d'or or gold skin, which is tist's bills, and little time wasted in a glace silk woven of yellow threads toothache. BARGAIN OF M. D. AND D. D.

Mutual Obligations Entered Into That Surely Should Have Been Satisfactory.

Newell Dwight Hillis, the now famous New York preacher and author, some years ago took charge of the First Presbyterian church of Evanston, Ill. Shortly after going there he required the services of a physician, and on the advice of one of his parishioners called in a doctor noted for his his ability properly to emphasize a good story, but who attended church very rarely. He proved very satisfactory to the young preacher, but for some reason could not be induced to render a bill. Finally Doctor Hillis. becoming alarmed at the inroads the bill might make in his modest stipend, went to the physician and said: "See here, doctor, I must know how much I owe you."

After some urging, the physician replied: "Well, I'll tell you what I'll do with you, Hillis. They say you're a pretty good preacher, and you seem to think I am a fair doctor, so I'll make this bargain with you. I'll do all I can to keep you out of heaven if you do all you can to keep me out of hell, and it won't cost either of us a cent. It is a go?"-Cosmopolitan Magazine.

Twice Convicted.

One more death, that of a young man, Milton Loney of Mt. Pleasant, husband of a young wife and father of an intant babe, must be credited to the return of the saloons to Wexford county. This young man's life is the fifth or sixth that has been taken as the direct result of the defeat of local option in Wexford county at the May election of 1910. Milton Loney accompained by two or three Mt. Pleasant friends and acquaintances visited Cadlilac and made liberal use of that city's saloon opportunities. His friends left him in a drunken state lying on the lake shore dock at Cadillac. The next morning his body was found floating in the water some distance from the dock. His drunken debauch in Cadillac had ended in death. His saloon visits resulted in his body being shipand sisters at Mt. Pleasant and to his almost prostrated young wife and orphaned child. The Wexford county saloon death list had been increased by the addition of the wage earner of another home and by the sacrifice of 4 another former good citizen

Petroleum as Old as the Hills russell Hastings

ETROLEUM is as old as the hills. When the earth was formed nature provided this oil. and in the crude state primitive man adapted it to many useful purposes, such as anointing, burning as fuel, and illumination, and also as an oblation in religious ceremonies; but the systematic rening of the product

from its very inception is strictly an American industry.

The name petroleum, meaning "oil from the rock," was familiar to the Greeks, Romans and Persians from the dawn of their history. Herodotus wrote of the Springs of Xante, from

ceived the idea of building. The maltha-lined cis-

terns found in Egypt and at Petræa, although of

unknown antiquity, are still in a perfect state

of preservation and fit for practical use. It is al-

so a well-established fact that in the preparation

of material for embalming and encaustic painting

in Egypt and Mexico maltha formed the principal

Many theories have been advanced as to how

bitumen has been produced, but no general chem-

ical formula can be given for the occurrence of

the several curious forms of the product. There

is no doubt, however, that bitumen represents

a substance that is obtained from petroleum,

found in its liquid state in the containing rocks,

and by the process of nature's laboratory has

been gradually converted into its more solid form.

This process may be described as evaporation.

As the oil seeps to the surface, generally by its

own gaseous pressure, the natural gases, spir-

ituous and light oils are evaporated by the sun,

and the residues, asphaltum and maltha, formed.

Indications of the presence of petroleum are fre-

quently found on the surface in the form of bitu-

men, but there is no fixed rule, and recent dis-

coveries seem to upset the theory that oil can

only be found under certain conditions. Wells

have been sunk and oil found along the coast of

California, where the operations have even ex-

tended for some distance into the sea. In a

variety of climates and from the sea level up

through the lofty ranges of the Andes has this

Petroleum, also known as mineral oil, crude

eil, and stone oil, may be described as a liquid

form of bitumen, found seeping from the crevices

of recks and floating about on the surface of the

water: "Its color varies from a light straw,

through amber, red and brown, to a dark green

and black. It is a mixture of hydrocarbons, or

compounds of hydrogen and carbon, varying con-

siderably, according to the locality in which it is

found, in both composition and consistency, and

of two distinct varieties, asphalt base and paraffin

The more volatile and inflammable portions of

the raw product are separated by refining, each

constituent being taken off and collected sep-

arately by gradually raising the temperature of

the oil and passing the consequent vapors or

gases through a series of condensers. The prod-

ucts from the paraffin bases are usually taken off

as follows: Gasolines and naphthas, kerosene or

standard white, as it is now known, other illumi-

nating oils, light and heavy lubricating oils, par-

affin, and greases of various descriptions. The

percentage of each product recovered from the

crude varies according to the character of the

crude. A fair average of Pennsylvania crude oil

ran as follows: Gasoline, 11/2 per cent; naphthas,

14 per cent; kerosene, 55 per cent; lubricating

oils, 171/2 per cent; paraffin, 2 per cent; and residue

of pitch, etc., 10 per cent. Many varieties of

petroleum require special treatment in order to

eliminate sulphur and other objectionable ele-

mants, From the asphalt base petroleum is de-

prived of a residuum employed in the manufac-

ture of insulating, water-proofing and roofing ma-

terials. A residuum known as "coke" is also

used as fuel and in the manufacture of carbons

base, with many constituents.

remarkable "light of the world" been secured.

which this oil was gathered by dipping myrtle branches on the surface of the water in 500 B. C., and it was well known at that time that asphaltum, petroleum, naphtha, and maltha were all various forms of the same substance, collectively classified as Ditumen. Maltha, more commonly known as pitch, was the indestructible cement of history, used in the construction of the Temple of Nineveh and the Tower of Babel; and there little doubt that it was universally employed for similar purposes. since the day when man first con-

the Seneca Indian once dipped his blanket in most rohe tried in vain to transfer the brilliant and variegated colors he discovered on the surface of the little pools of petroleum. Disappointed because he could not at once convert his attractive find into a satisfactory dye material, the red man

found other pur-

poses for which the

THE LAKEVIEW GUSHER, SAN JOAQUIN VALLEY, CALIF. oil could be employed. The blanket was carefully squeezed and the oily substance recovered. Rude pits were dug, lined with rough-hewn timbers, and the oil was stored away for future use. Thus began the first known practical conservation of petroleum in America. Many of these old Indian pits are still found in an excellent condition, the timbers being practically as sound as the day when cut

> It was not long, however, before the white man began to realize the value of this remarkable discovery, and enterprising pioneers began to dig pits similar to those of the Indian and to gather the oil, which for many years was bottled and, under the mames of "Seneca Oil," "Indian Oil," and "Snake Oil," sold extensively as a sure cure for all the aches and pains to which man in heir. It was universally accepted as a medicament, but with little curiosity as to how great a quantity of the wonderful curative could be secured or whense it came.

As early as 1790, the manufacture of sait became an important industry in the United States, and for the purpose numberless brine wells were sunk throughout the country, especially along the western slope of the Allegheny Mountains, where the brine was found in great abundance, collected, and evaporated into salt. Many of these wells had to be abandoned on account of their producing uncontrollable quantities of petroleum, then considered a most undesirable element. A notable incident of this kind occurred at Little Renox. Creek, near Burkesville, Kentucky, in 1829, when an attempt made to sink a well and secure what was supposed to be an unlimited supply of brine resulted in the striking of a mammoth oil gusher. Consternation and disappointment spread among the owners of the well as they witnessed the great quantities of oil flowing rapidly beyond the creek and into the Cumberland River, where it finally caught fire and burned for a distance of over fifty miles. When the fire was extinguished the oil flowed on as rapidly as before, and, with the exception of a small quantity which was later recovered, bottled, and sold under the name of "American Medicinal Oil," the product was

In 1846 Dr. Abraham Gesner discovered a method of extracting an excellent grade of illuminating oil from coal, and in 1854 he patented a successful illuminant, "kerosene," commonly known as "coal-oil." The improvement was so great over the animal and vegetable oils then in use, the objectionable odor and smoke being eliminated, that they were gradually set aside, and in order to meet an enormous and ever-increasing demand for the product, it became necessary to establish factories throughout the country for the extraction of this popular filuminating oil from coal. Altogether there were over 60 of these establishments in operation at one time, and the price of kerosene advanced rapidly until 1857. when it sold as high as \$2 a gallon. The industry was short lived, however, for upon the discovery of petroleum in sufficient quantities to effect a oils could be manufactured, these kerosene factories were converted into refineries of crude oil in order to prevent their total loss.

The great demand for kerosene and its consequent high price were the cause at attracting the world-wide attention of chemists and scientific authorities, and repeated attempts were made to

discover the means of producing at a lower cost some other satisfactory illuminant from coal or petroleum. Researches in this line were continuous and untiring until early in 1855, when a complete and invaluable analysis of petroleum taken from an "oil spring" on Oil Creek, near Titusville, Pennsylvania, was made by the distinguished chemist, Prof. Benjamin Silliman, Jr.

WELLS OF THE SEA SUMMERLAND, NEAR

SANTA BARBARA CALIF

The manner of driving or sinking blame for it? an oil well is simpler than is generally imagined. A steel drill, weighing anywhere from 1,000 to 3,000 pounds, and measuring about 30 feet in length, is selected for the purpose. This is fastened to an ad-

justable line and connected with a heavy arm or beam, driven by an engine which continually raises and releases the arms and permits the drill to fall with great force into the hole. With each drop, and by its own weight, the drill literally crushes and pulverizes the rock into sand, which is removed with a "sand pump" from time to time as it accumulates in the boring. As the work progresses and the hole deepens the adjustable line is lengthened and the drill lowered as required.

feet, and when a crevice is struck in the rock, the tem and electric light system? oil is frequently brought to the surface by the force of its-own pressure; but it often becomes necessary, in case the flow of oil is not considered sufficient, to insert a charge of explosive at the bottom of the boring, "shoot" or blast the well, and thus increase the supply. After the drilling and blasting are completed, the well is then cased with iron piping, known as a "lining," and a pump ers and between neighboring rural

In the old days each well was pumped separ ately, but the industry is now conducted upon such an economic and scientific basis that the wells are pumped in groups by a veritable network of connecting rods, extending over the fields and driven by an engine in a centralized station.

In some districts the oil fields have been practically honeycombed with wells and the production of petroleum greatly reduced or scattered by continual pumping.

As the enterprise grew many complex problems arose from time to time, but they have all been gradually but effectually solved and the industry placed upon a conservative and economic basis.

The total flow of oil in the United States for the year 1859, the first of which any official record has been kept, amounted to only 2,000 barrels. For the year 1909 the production as estimated by David T. Day of the United States Geological Survey amounted to about 178,000,000 barrels, which, if placed in a single body, would be sufficient to float a gigantic fleet of 935 Dreadnought battle ships of the new 26,000-ton Arkansas type of the United States Navy.

Gradually the oil derrick wended its way from a northeasterly to southwesterly direction, and the petroleum industry was extended over a vast terri-

During the year 1908 there were 16,909 wells sunk in the United States, of which but 3,214 were

Extensive experiments have been conducted to determine the value of petroleum as fuel for power plants as well as for the navy and merchant marine, especially in England and the United States. Numerous merchant vessels have been fully equipped for burning oil as fuel, and, by practical test, it has been determined that oil will evaporate 30 per cent more water per pound than coal, is easier to handle and stow, offers no difficulty in burning, and, in its use, time formerly wasted in coaling and in useless labor is saved, smoke eliminated, fuel space economized, steaming and sreed capacities increased, strain on boilers greatly decreased, and a clean ship assured at all times The crude oil of paraffin base is particularly desirable for fuel, and the only obstacles to its universal use are: (1) Difficulty in optaining; (2) increased cost over coal. With the production of sufficient petroleum at a reasonable cost, there is little doubt that every ship affoat will be eventually equipped with oil burners and the coal grates pass from use.

The United States navy has equipped the battleships Delaware, North Dakota, Utah, Florida, Arkansas, and Wyoming with auxiliary provision for from 400 to 600 tons of fuel oil each.

The new battleships now under construction at the Fore River Ship Building Company, Philadelphia, for the Argentine government, will also be equipped for auxiliary oil capacities of 600 tons

The usefulness of petroleum is almost unlimited. Besides the many grades of gasolines, naphthescompetition as a basis from which illuminating, illuminating oils, lubricating oils, paraffin, and greases obtained from the crude oil paraffin base, filtered paraffin residues or concentrated jettles. are also obtained. These jellies are universally employed as therapeutic agents in diseases of the skin, as a basis in the manufacture of medicated ointments for general household use, and also in the compounding of shoe and metal polishes.

—— The —— National Grange

Conducted by Charles M. Gardner, Editor of the National Grange, Westfield, Mass.

TOPICS OF GRANGE STUDY

Trend of Thought In the Order Shown by Matters Discussed In Various States.

The general drift of Grange discussion, and the lines of thought which the organization is bringing before its members throughout the country, may be well understood from the following topics assigned for discussion. They are picked at random, from Granges in many states, and are illuminating as to the actual trend of Grange thought, as brought out by discussion and

NOVELTY AT OREGON GRANGE

Movable School of Agriculture Arouse interest of Farmers at the State Convention,

An interesting feature of the recent annual State Grange convention in the state of Oregon was a "movable school of agriculture" that attracted widespread attention. The Oregon Agricultural college had the exhibit in charge and the farmers were

mightily interested. The exhibit consisted of a small model school, with a suggestive program of practical information which the farmer could use in every-day work, while members of the college faculty were present to explain the

exhibits and apparatus. As an outgrowth of the farmers' in stitutes there has developed an urgent demand for a more extensive educational system for the farmer. The movable school is suggested by the college as a solution of the difficulty so that, practically in their own homes, all who desire may have the advantage of moderately equipped laboratories for technical study and practical work in problems relating to the farm and home.

The one-week program suggested by the domestic science department in cludes sewing, bread making, meats and vegetables, home nursing, invalid diet, and like subjects. The horticul ture department outlined three days work in pruning, grafting, budding, spraying, apple packing, and similar topics. The poultry department suggests teaching the housing of fowls incubation and brooding, and the solution of other problems of the poultry

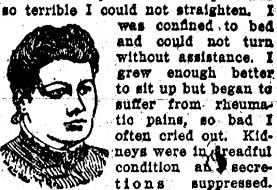

The college planned to conduct these schools at least three days at a time in each place, with three or more departments of instruction, such as domestic science, dairying, poultry husbandry and horticulture. But few can be sent out at present, since the legislature refused the extension work appropriation asked for this year, but it is hoped that a future legislature may provide for this study of applied

Saving Money on Milk Cans. In Michigan the State Grange is rendering practical service to the farmers by making a contract with a large supply house to furnish milk cans, thereby securing a much lower price than would be possible if each milk producer went out to buy his own singly. Hundreds of dollars are saved this year to the farmers of Michigan by this practical phase of cooperative effort.

Cement Talk No. 5

The term "barrels" is usually used in speaking of quantities of cement. However, cement is seldom actually packed in barrels. A barrel is the unit of measure and simply means four sacks, each sack weighing 95 lbs. Universal Portland Cement is packed in paper or cloth sacks; in most cases cloth sacks are used. Universal is of the best quality of Portland Cement possible to manufacture. Forty million sacks are made and consumed yearly in this country. The railroads use hundreds of thousands of barrels. It is used by the biggest architects and contractors in the cities and the government uses it extensively in all departments. If you have any concrete work to do, ask your dealer for Universal. It is the best for concrete work of any kind. UNIVERSAL PORTLAND CEMENT CO.

use of power has multiplied his ca-

pacity a hundredfold. The man with the hoe, dull and uncomprehending, is passing, and in his stead we-find the man with wits keen to direct and horsepower when used continuously. hands skilled to control the energy which doubles his own a score, whether it be the four-horse team, the steam engine, or the gasoline tractor. Through the agency of well adapted agricultural machines he has been able to direct this energy into useful work, the effectiveness and nicety of which the unaided hand of man could never equal. This year at Winnipeg, Canada, was held a competition of motor tractors, steam, gasoline and kerosene. Here were met thirty-one outfits from half as many companies. For three weeks these machines were subjected to the severest tests on the brake and in the field under actual working conditions. Virgin prairie sod, the toughest task the plowman has ever encountered, was severed and upturned with a rapidity and ease amazing to the layman. What was the purpose of it all? Primarily to determine the adaptibility of the various types of machines to the work for which they

develop and perfect a machine which means the maki -- of the northwest. We are accustomed to the use of power on the farm in Michigan. The principal sources are the windmill. the gasoline engine, the steam engine, and the horse. The field has been dibeen assigned the windmill and the gasoline engine. The steam engine handles the heavier duties to which it is adapted, but to man's most faithful friend, the horse, falls the greater share. The steam engine has never been seriously considered as a field machine in Michigan on account of its weight and unwieldiness on the comparatively small fields and farms. There is being brought forth today. however, the light internal combustion tractor intended for general purpose work upon the farm. It has not has relieved man of his.

CONTROL OF

...... The history of agricultural machin- as yet proven its worth, but many chine find a field of usefulness, and if so what would be the basis of its

Suppose we give the matter of the amount of power furnished some consideration and in so doing leave out all other factors. We will compare roughly the power furnished by the shortened the hours of labor. Man's tractor with that furnished by the progress depends largely upon his ca- horse. At present the unit of power pacity to do work, which is the result is the horse. This unit may be comof the expenditure of energy. The bined into the two, three and even the four-horse team. The latter is about the limit of power that one man can handle advantageously. The average horse is able to develop nearly a unit One horsepower here is intended to mean the unit used in measuring work. A man then driving a fourhorse team would be able to control the energy equal to four-horsepower. If he were using a twenty horsepower tractor which should develop, roughly speaking, about fifty per cent. of the total horsepower at the draw bar, he should then have from 6-10 horsepower available for effective work with the engine working at someing out. An example of what we by the following: A four-horse team may be divided and each horse or that the spray from a pot does. unit used complete in itself, this adapting it to smaller yet important are intended, but in a larger sense to would manifestly be impossible, but on the other hand the tractor through How to Cook These Two Vegetables its construction and efficiency would be found especially valuable for belt work where horses can be used to very little advantage. There are many questions of design such as types of then cut into dice, or, if very small, vided and to the lighter duties have engines, gears, clutches, height, height slice them. Put into a stew pan with

hibernate and start new generations in the spring. The remedy is obvious SQUASH BUGS -destroy all old vines, squash, pumpkin, cucumber and all vines of that family, just as soon as they have served their purpose, either plow or burn, and do it then.

On cool nights the bugs love to hide under shelters. Old shingles, placed on the ground near the vines. harbor dozens of the adults over night. The lesson is obvious—put out pieces of board and shingles and destroy the bugs early in the morning before they get to the vines. Jar the bugs off into pails of water having a little kerosene floating on it,

Sprinkler Top That Can Be Adjusted In the Top of a Water Bottle.

Laundresses usually clothes before ironing them and the method that has been in use for years is to dip the fingers of one hand in a bowl of water and flirt the drops over the garments. In addition to its crudity, this method sprays the clothes very irregularly. A New York man has devised a sprayer which is far superior to the fingers. It consists of a little metal sprinkler, like those that fit in the spouts of watering pots, and fits_into the neck of a

Conan Doyle at His Best,

County Clork,

The story-reading world seems to be unanimous to the yerdiet that Sir Few medicines are of any benefit | Arthur Count Doyle is at his best in his Sherlock Holmes stories. The Chicage Becord-Herald is now in the act of breaking another record by printing in its columns all the Sherlock Holmes stories ever written, both short and long. Some it has published in the past, but many of the best are still to come. It is the only paper in Chicago now running the Sherlock Holmes stories.

> The Record-Herald has only recenty begun on the "Memoirs of Sherlock Holmes," a series of thirteen of these famous detective tales. The stories which have been appearing only on Sundays, are now to run right along through every day of the week until completed. This series is to be followed by two long Sherlock Holmes serials-"A Study in Scarlet" and "The Sign of the Four." Many persons are taking advantage of this chance to read the world's best detective stories.

Sherlock Holmes has the honor of being the most widely known character in action. The fascination of his adventures and of his matvelous detective powres is felt by all classes of readers. You can always fine some of the best popular fictions of the day in The Record-Herald, but this Conan Doyle series is something out of the ordinary, even for this enterprising paper.

I have Fruit Lands, Lake Shore Farms, Improved Farms and City property in all parts of Charlevoix County to sell or trade. Also farms and business chances anywhere in United States.

James C. Dahlman. "Cowboy" Mayor of Omaha, "Throws the Lariet"

Mayor Jas. C. Eahlman started his career as a cowboy, and is at present Mayor of Omaha, and has the following record. Sherifi of Dawes Co., Neb., three terms: Mayor of Chadron, wo term; Democratic Nat'l Committeeman, eight years; Mayor of Omaha, six years, and in 1910 Canidate for Governor of Nebraska. Writing to Foley & Co., Chicago he says: "I have taken Foley Kidney Pills and they have given me a great deal of relief so I cheerfully recommend them." Yours truly,

(signed) James C. Dahlman. Hites Drug Store.

A Chance Now.

Some enterprising man in East Jordan can step into a nice business that s bound grow in your town. We have had so many letters from ladies asking us "why we can not establish a carpet cleaning machine here." If you have a dray line or any business to run in connection write us at once and we will assist you in placing the most modern machine made at a price that will suprise you and your city will amply support such an enterprise. A visit to our plant in Pet will convince the most skeptical. Write at once as the fall cleaning will pay for it.
