**BETTER HEALTH—LONGER LIFE**

It is exhilarating to awake with a lively, energetic body; it is miserable to drag an aching, tired, weary body from a restless, sleepless bed. For a normal, thoroughly relieving urinal flow, cleansing the system of wastes that poison and impair health, take Foley Pills (diuretic) and feel again the urge of an active, ache-free body, an alert mind, good appetite, sound sleep. Men and women everywhere have been using and recommending them for years. Try them. Sold by Hite's Drug Store. adv.

This is the latest portrait of popular Adolphe Menjou, the "movie" star. Menjou was born in Pittsburgh of French parents and was educated at Culver Military academy in Indiana and at Cornell university. It was while attending Cornell that he first got the theatrical bug. Everybody knows his ability on the screen.

**Uncommon Sense**  
By John Blake

**A HEART-BREAKING JOB**

IT IS perhaps natural for mothers to be climbers. They want their children to know "better people." They want their daughters to marry well, so as to be relieved of the anxieties that perplexed their mothers. So they constantly plot and plan to "break in" to a station in society a little further up—and if they gain that, to go on up further. It means the acceptance of snub after snub, and the necessity of accepting them all as if they were kind words. It means in most cases the expenditure of money which would be far better put into the savings bank or into some good investment, where it could be got out again when needed.

The climber spends her money—or more likely her husband's—doing things for people who do not want anything done for them, giving parties which few of the people invited to ever attend, and in seeking to "buy into" a place higher up. That ambitious people should want to meet and mingle with people of more education and culture is easy to understand. That means progress. One of the benefits of education is that it fits the person who gains it to make a wider and more useful acquaintanceship. But that sort of advancement is not "climbing."

The climber cares nothing for the attainments or the cleverness of the person with whom she wants to mingle, or with whose children she wants her children to associate. All she cares about is some delicious "place" which they occupy, and which she wants to occupy with them. Naturally most of the people who are forever trying to struggle into another "set" fall of the attempt, and by and by become resigned to filling the place in life for which they are equipped, financially. But many of them, particularly mothers, persist and break their hearts when they find that all their planning and scheming has gone for nothing.

It is far better to choose your acquaintances and those of your children from those similarly situated, than to endeavor to break through an upper crust—even if you might in the end arrive in a strange and not too friendly region. For the people who have the "position" have, as a rule, gained it by long effort. They are afraid to lose it by associating with "climbers," and they are certain to be fendishly rude for a long time to the new arrivals lest they should expose their own "newness," by being pleasant.

**Fatten Beef in the Corn Belt**  
Tends to Equalize Number of Cattle Slaughtered at Various Times.

(Prepared by the United States Department of Agriculture.)  
Besides improving the condition of a large number of cattle from the range, the fattening of steers in the corn belt tends to equalize the number of cattle slaughtered at different times of the year, according to an analysis of the methods and results of cattle feeding in five representative sections of the corn belt, by the United States Department of Agriculture.  
About one-third of the beef cattle marketed from the range are shipped to the feedlots of the corn belt as stockers and feeders. Beef cattle are well adapted to the utilization of legume hay and such coarse roughages as cornstalks and straw, which must have a place in a well-balanced crop rotation. These roughages when fed with a liberal amount of corn in the ration usually produce a higher grade of beef than that produced on grass alone.

**Districts for Study.**

The districts chosen for study typify three general methods in the fattening operation. In eastern Nebraska and southwestern Iowa standard management provides for dry lot feeding with corn and legume hay, particularly alfalfa. Silage plays an important role in feeding enterprises in eastern Iowa, Illinois and Indiana. The practice of fattening steers on grass pasture was the rule in the Missouri district studied. The time covered in the analysis of costs and methods extended from the opening of the 1918-1919 feeding season to the close of the 1922-1923 season, thus including two years of high price levels, two years of low prices, and an intermediate year while deflation was under way.

Each season approximately 100 records of feeding operations were obtained from farmers in each of the five districts. An effort was made to assemble all the details of management from the time the feeder cattle were bought until the fat cattle went to market. The effect of the kind and quantity of feed available upon methods of handling and rations used received special attention. These records have been assembled and analyzed and the results published in Technical Bulletin No. 25-T, "Costs and Methods of Fattening Beef Cattle in the Corn Belt."

**Important Points Touched.**

Some of the more important points are touched on in a two-page summary, of which a few of them are as follows:

"Approximately 84 per cent of the total cost of 100 pounds gain was for feed, 6 per cent was for interest on investment in cattle and equipment, 5.5 per cent for labor and the remaining 4.5 per cent for miscellaneous expenses. The rate and cost of gain varied widely from one farm to another. The rate of gain on medium weight steers varied from 0.4 to 4.2 pounds per day, whereas the net cost of gain for cattle of the same weight ranged from 6 to 84 cents per pound in the same feeding season.

"Almost half the cattle finished in dry lots were pastured for some time previous to intensive feeding. Each day of fall pasture on second growth clover or cornstalks was worth 3.4 pounds of gain, plus 2.2 pounds of dry roughage, plus 10.7 pounds of silage when the feed requirements of the fall pastured steers were compared with those of strictly dry-lot cattle.

"The relative prices of feed largely determine the proportions in which they should be fed to stock at any given time.

"To produce 100 pounds of gain, calves required only 64 per cent as much feed as did heavy cattle. Yearlings and medium-weight cattle required, respectively, 75 and 87 per cent as much as heavy cattle to produce 100 pounds of gain.

"Heavy cattle may be fattened in a much shorter feeding period than light-weight steers. A greater cost of gain, together with the necessity of marketing them promptly when finished, make the feeding of heavy cattle more hazardous than the feeding of light-weight steers.

"The average daily ration of 129 droves of cattle weighing 891 pounds when bought is typical of that used in cattle feeding in eastern Nebraska and western Iowa. Each animal received, on an average, 19 pounds of shelled corn, and 9 pounds of legume hay, and gained 2.19 pounds per day for 131 days. The feed required per head amounted to 45 bushels of corn and 1,150 pounds of legume hay, with a pork credit of 77 pounds per steer.

"Silage feeding is more common in eastern Iowa, Illinois, and Indiana because of the smaller and less certain quantity of legume hay available. The practice of fattening while on grass pasture was more common in the west-central Missouri district where almost two-thirds of the cattle fed were handled in this way.

"The margin in sale price per pound necessary to cover fattening costs increase rather regularly with the length of time on grain feed. This amounted to 75 cents per month when corn was worth \$1.40 per bushel and 20 cents per 100 pounds for each additional month fed when corn was worth 50 cents per bushel."

**Drought Is Not Always Harmful**  
Insufficient Moisture for One Crop May Be Ample for Another.

(Prepared by the United States Department of Agriculture.)  
The term "drought," as applied to a lack of moisture in the soil for proper plant growth, embraces many conditions which differ with each type of agriculture. What may constitute insufficient moisture for one sort of crop, or one part of the country, may be ample for another crop grown in different soil or in a different climate. Says the weather bureau of the United States Department of Agriculture:

In the East, where precipitation is usually well distributed, a period of 30 days without beneficial precipitation constitutes a drought, which would be especially bad if the subsoil were not well supplied with moisture at the beginning of the drought period. Over the Pacific coast states possible drought is chiefly in the colder half of the year.

**Hurts Nonirrigated Crops.**

A generally dry winter season may be disastrous to nonirrigated crops. In the central valleys and Great plains, drought during the early spring months will greatly diminish the wheat yield, and drought in midsummer brings disaster to the corn crop. A short period of drought in the eastern part of the country during the early spring months will frequently greatly curtail the hay crop, but may not seriously injure wheat; in fact, it may prevent excessive straw growth. A period of drought may be beneficial to corn in its early growth, forcing the roots to greater depths. Drought of short duration may be quite disastrous to corn when it follows a wet period immediately preceding the formation of the ear, when abundant moisture is required. If previous wet weather has caused the root system to develop near the surface, the supply of moisture available in the subsoil may not be reached in time to prevent loss.

**May Benefit Cotton.**

Moderate drought is not always associated with scanty production. It may prove beneficial to cotton by hindering the activity of insect pests that do not multiply in dry weather. If the cotton plant remains somewhat dormant during drought and resumes growth promptly when moisture is supplied, the crop may develop after the period of worst insect infestation is over.

Early droughts are particularly detrimental to most truck and small-fruit crops, as growth and development of these are usually rapid and any material interruption is decidedly harmful.

**Development of a Plan Needed for Good Garden**

The first step toward making a successful garden is the development of a plan showing the general arrangement, direction of rows and area devoted to the different crops. More economical use may be made of the area available by planning for succession, companion and intercropping. For example, a crop of late beets may be planted after a crop of early peas have been harvested or a crop of lettuce may be raised between the tomato plants and gathered before the tomato plants need all the space. Fresh peas, beans and corn may be had over a longer period by making several plantings at intervals of two weeks or by planting early, mid-season and late varieties. The likes and dislikes of the members of the family should be considered and selections made accordingly.

**Fanning Mill to Clean Seed Most Satisfactory**

A few hours spent indoors cleaning seed with a fanning mill may save many days in the hot sun next summer and will pay handsome dividends in the form of bigger and better crops. A farm fanning mill operated at the correct speed and equipped with the proper sieves and screens is capable of doing an excellent job of cleaning clover, alfalfa and other seeds. Since experiments have shown that the main object of cultivation after the preparation of the seed bed is the eradication of weeds, and since most weeds are introduced by means of impure seed, the use of cleaned seed will save a great deal of future work. The value of a good fanning mill in cleaning farm seeds has been demonstrated by hundreds of farmers.

**Agricultural Hints**

Soy-bean hay as a roughage is equally as valuable in the ration as is the seed.

The main thing in inoculating soy beans is to make them real dirty with the right kind of dirt.

Swiss chard belongs to the beet family and is grown the same way—in rows thinned 6 to 12 inches apart.

Treating fence posts with creosote makes many kinds of wood posts last 20 or more years. The treatment costs but little.

Let the hoe be your garden putter, brascal and niblick, for half an hour a day, and you will surprise yourself with a weedless garden.

**MICHIGAN BELL TELEPHONE CO.**  
Long Distance Rates Are Surprisingly Low  
For instance:  
**for \$1.55**  
or less, between 4:30 a. m. and 7:00 p. m.  
You can call the following points and talk for THREE MINUTES for the rates shown. Rates to other points are proportionately low.

FROM EAST JORDAN TO:—	Day Station-to-Station Rate
DETROIT	\$1.30
LANSING	1.10
MUSKEGON	.95
FLINT	1.05
GRAND RAPIDS	1.00
YPSILANTI	1.30
CHICAGO	1.45
ELKHART, IND.	1.35
EVANSTON, ILL.	1.40
SOUTH BEND, IND.	1.40
TOLEDO, OHIO	1.40
GREEN BAY, WIS.	1.00

The rates quoted above are Station-to-Station Day rates, effective from 4:30 a. m. to 7:00 p. m. Evening Station-to-Station rates are effective from 7:00 p. m. to 8:30 p. m. and Night Station-to-Station rates, 8:30 p. m. to 4:30 a. m. A Station-to-Station call is one that is made to a certain telephone rather than to some person in particular. If you do not know the number of the distant telephone, give the operator the name and address and specify that you will talk with "anyone" who answers at the called telephone. A Person-to-Person call, because more work is involved, costs more than a Station-to-Station call. The rate on a Person-to-Person call is the same at all hours.

Additional rate information can be secured by calling the Long Distance operator

BOYNE CITY, MICHIGAN

## Briefs of the Week

Born to Mr. and Mrs. Joseph L. Couchon, a son, Patrick, April 16th.

Born to Mr. and Mrs. Darius Shaw a daughter—Gloria Mavis—April 12.

Born to Mr. and Mrs. Bert A. Dole, a son, at Lansing, recently. They were former East Jordan residents.

Henry Hall, an old time resident of Boyne City, died Saturday morning at the County Farm, where he had been for the past two years.

The use of cod liver oil in the feeding of livestock has increased its demand to such a degree that imports last year exceeded 2,500,000 gallons, valued at nearly \$2,000,000.

Mr. and Mrs. Archie McArthur left Monday for Chicago, where they will assist in out-fitting the Str. Crawford, and will work on same during the sailing season, which they expect will start in a couple of weeks.

The huge economic losses caused yearly by woods fires should make everybody realize the importance of fire prevention. The South is responsible for the burning yearly of about 20,000,000 acres of forest and cut-over land, or about four-fifths of the total forest area burned in the United States. This represents a money loss running into many millions of dollars.

James Evans returned home last week from Flint, where he has been visiting relatives.

Mr. and Mrs. Henry Steenhagen were here from Muskegon for a visit with friends and relatives.

Mr. and Mrs. Joe Moore and son, Harold, were here the past two weeks from Munising for a visit.

Mrs. Marjorie Miller returned from Chicago, Tuesday, where she attended a Hair Dresser's Convention.

Mrs. M. Berry of Muskegon was here first of the week to visit her daughter, Mrs. Henry Bridenstine.

Mrs. Clyde Hollinshead who has been visiting relatives in Grand Rapids for several weeks, returned to her home here Monday.

Mrs. Ernest Bennett, who lives in North Wilson township is suffering from a badly bruised and strained knee. The accident occurred when Mrs. Bennett fell while climbing into a buggy. She was taken to Petoskey, where the X-ray showed that there were no broken bones. Mrs. Bennett has been confined to her bed for several days, but is now able to be about again. Until she fully recovers, she is staying with her son-in-law and daughter, Mr. and Mrs. B. C. Mellencamp. Boyne Citizen.

John Miles is here from Flint for a visit with friends.

Miss Dorothy and Fred Zoulek left first of the week for Detroit.

Rev. C. W. Sidebotham was in McBain on Monday on Church business.

Miss Leona Kaake went to Flint first of the week to seek employment.

Mr. and Mrs. Wm. Streeter left Tuesday for a visit with their daughter in Detroit.

Mrs. Hiley Ensign underwent an operation at the Lockwood hospital, Petoskey, Thursday.

The Presbyterian Missionary Society meets with Mrs. Howard Porter, Friday, April 27th.

"Use scrub sires to make good hash, but purebred sires to get the cash" is a slogan suggested to arouse interest in promoting the use of purebred bulls.

John Porter was a Roscommon business visitor latter part of last week. Enroute home, by auto, Saturday night, he encountered some pretty heavy snow drifts that impeded his progress somewhat.

Reports come from the Soo that the Great Lakes shipping schedule will be about one week slower than it was last year. Last year on April 13 the first steamer arrived at the Soo to take the mythical "Harbor Master's Hat." This year ice and reverse weather conditions have held the ships in their winter quarters.

Only 22 State Banks have failed since the legislature 39 years ago provided for the supervision of State incorporated banks, it was revealed in figures made public today. At present 525 State Banks are operating in Michigan, and there have been no failures since the present head of the Michigan department of banking R. E. Reichert, was appointed early last year.

A fleet of commercial fishing tugs and State Department of Conservation officers are busy scattering approximately 8,000,000 white fish fry along Northwestern Michigan ports. The federal hatchery at Charlevoix will furnish 30 cans containing 25,000 each to be planted off Traverse City; 40 cans for Manistee and 100 cans for Ludington, and a big lot off Charlevoix, Beaver Island, Petoskey and other ports.

East Jordan people remember with pleasure the lecture they heard Dr. Frank Bible of Chicago give at the Presbyterian Church about a year ago. Dr. Bible is an outstanding speaker of national reputation and is an authority on missionary subjects. He is to be here again on May 3rd. The Presbyterian Ladies will serve a supper at the nominal price of 25c. In order that it may be known how many to provide for, the tickets will be sold in advance. adv.

The District Convention of the Michigan State Federation of Woman's Clubs will be held on April 23 and 24 at Traverse City. Mrs. John L. Sweetman, of Manistee, who is the President of the Northwestern District, will preside. Mrs. A. W. Peck, formerly of Petoskey, and now of Traverse City, will be in charge of the room assignments. For reservations, write Mrs. Peck at 119 East Eighth St. It is thought that several car loads will go over from this region.

A man may be able to trade his reputation for money, but he can't trade back.

**Imperfect Rubber Goods**  
Many were the troubles that early manufacturers of rubber goods experienced on account of the propensity of rubber to expand and contract with the heat. Daniel Webster, who was Mr. Goodyear's counsel in his patent litigation, humorously referred to a fine cloak of India rubber he once owned, stating that in cold weather it stood well by itself, and that he often set it out on the porch surmounted by his hat, many persons passing by mistaking it for the Sarc of Marahfield himself.

St. Clair—Fire of undetermined origin, which broke out in the barn and spread to his home, caused about \$1,000 damages to property owned by George W. Jones. Jones was alone and ill in his home when the fire was noticed.

Ludington—The European red mite, a pest discovered in the eastern part of the state three years ago, has appeared in Melard Warren's apple orchard in Summit Township. It is the first time the mite has been located on the west side of the state.

Buchanan—The new dread Malta disease, said to be quite prevalent in this community, took its first victim here when Mrs. Charles French, 34 years old, died of that malady at the home of her mother, Mrs. Nora Miles. Mrs. French had been ill but two weeks.

Manistee—Snow saved several buildings adjoining the home of John Adamaki, which burned in Eastlake, when volunteer firemen were unable to procure water nearby. Snow was thrown against the walls of the adjoining buildings, cooling and wetting them when the siding began to scorch.

Ann Arbor—Bert Wetherbee, 60 years old, was killed instantly here when a truck loaded with gravel which was to be dumped, fell on its side, pinning him beneath the cab. His skull was crushed. The driver of the truck noticed that the vehicle was settling on one side, and jumped from the cab, at the same time trying to push Wetherbee out of danger.

Kalamazoo—Southwestern Michigan's fruit belt escaped damage during the recent cold weather according to a report made following a check by the county agricultural agent. Although the temperature dropped to 26 and remained as low as 30 for long periods, but little fruit suffered severely. The buds on most of the peach, pear, and cherry trees swelled considerably, but were not seriously damaged, fruit experts believe.

Lansing—Considerable property damage was caused and scores of clerks and shoppers were soaked with water when an elevator in the J. W. Knapp Department Store here went past the top floor of the building into the roof, breaking a sprinkler system water pipe. Occupants of the elevator were not injured, although drenched in the avalanche of water from above. A defect in the elevator mechanism caused the accident, according to department store officials.

Grand Rapids—William H. Loutit, of Grand Haven, executive chairman of the conservation commission, formally has dispelled fears of some sportsmen that rainbow trout will no longer be planted. He said these fish would be planted by the department in every trout stream, except a few reserved for brook trout. Loutit plans to extend the rearing pond system, not only by enlarging the present ponds at Baldwin, but by establishing new ones at other points.

Battle Creek—The Rich Steel Products Co., which started business in Battle Creek in 1916 with a \$25,000 capitalization and has become the world's largest manufacturer of automobile tappets with \$2,500,000 in outstanding stock, has been sold. The present concern will be dissolved and in its place the Rich Steel Products Co., of Michigan, will be formed with an added capitalization of about \$1,000,000. The present concern is incorporated under the laws of California.

Battle Creek—A determined hound and a determined alreadale died here while defending property that did not belong to their master. Mrs. Stanley Welch drove her children to school in a coupe and parked the car on Hubbard street. When she came out the two dogs were on the driver's seat and showed fight. Police were called and tried several methods to move them from the car. As a last resort the officers had to shoot the dogs before Mrs. Welch could go on her way.

**Canine Characteristic**  
Once in a while you meet a man who is like a dog. He would rather stand still and shiver than to get out and hustle and keep warm.—Cincinnati Enquirer

## A Friendly Spirit

You will find a spirit of friendliness in this bank from the moment you cross the threshold. It is not a pose, but the expression of our feeling that it is only through YOUR friendliness that we exist and prosper.
