The Lake Charlevoix Association will be holding its annual meeting at the Boyne City City Hall Auditorium Thursday, July 19 at 7 p.m. Speaking will be Dr. Leighton L. Leighty, an expert from Michigan State University. He will be talking about property rights and zoning, shore land development and environmental regulations. The County Sheriff's Department will be demonstrating a noise monitoring device used by the marine patrol.

That issue brought up density See Planners/Page 5 **Loding Awards** announced by BC Planners

The annual Marvin Loding Community Pride Awards were announced at the Boyne City Planning board meeting after the votes were tabulated for the three categories in which the awards are

given. Taking the award for the Residential Division was the Harry and Delores Manoogian residence located at 441 Elm Street. The award for the Commercial Division was given to the American Legion Hall located at the corner of South Lake and Main Streets, while the Industrial award went to Augat-Altair Tool Company which is in the new Air-

Industrial Park. The awards will be formally given out after the City Commissioners approve the names presented to them by the Planning Board. They expect to have the awards for a formal presentation at the second Tuesday evening meeting of the City Commission which will be held in August at the Litzenburger Place at 7 p.m.

Dituaries

JOHN T. THURSTON

John Thomas Thurston, 42, died July 11, 1990, at his Traverse City

Funeral was Saturday, July 14, at the East Bay Calvary Church, Traverse City. The Rev. Paul Tomlinson of West Union, Ohio officiated and graveside service was Saturday afternoon at Evangeline Township Cemetery, Boyne City.

Mr. Thurston was born April 24, 1948, in Toledo, Ohio, the son of Edward and Anne (Cook) Thur-

was a 1966 graduate of Boyne City High School and received a bachelor of science Michigan degree from Technological University at Houghton in 1970. He then received a master's degree in biochemistry from Central Michigan University in 1976 and a MA from Gordon-Conwell degree Theological Seminary in 1980.

Mr. Thurston has been a resident of Traverse City for the past eight years. He was a computer programmer/analyst with College of American Pathologists and a teacher with the Kingsley-Traverse City Adult Education.

Before moving to Traverse City. he taught science and math on the high school level at Alba, Petoskey and Peck.

laboratory He Was

Gloria and Bill Seaver of Thunder Bay, Ontario, Canada spent several days of the 4th of July week here visiting her mother, Reata Townley.

with Nancy Northup 582-9174

Judge and Mrs. Harvey Varnum celebrated their 45th wedding anniversary with a trip to Toronto, Ontario, where they enjoyed "The Phantom of the Opera".

The eight brothers and sisters of the Rozycki family really enjoyed a great reunion time over the week of the 4th of July. especially so since it was about the first time in 5 or 6 years that they had all been together! The group of approximately 25, of all ages came from Honduras, Detroit, Chicago and the local area, with many staying at the Wolverine-Dilworth Inn, to join the family festivities in the Walloon Lake and Petoskey area. The get together was planned by sisters Kathleen Ruhs and Susie Bereziuk, with some events held at Susie's home on the Indian Garden Road.

Chris, Brent, and Jodi spent a week or so here with their grandparents, Bob and Shirley Mathers, while their parents, Dave and Cheri Garvin of Traverse City enjoyed vacationing and visiting relatives in Texas.

About 25 fellow co-workers honored Leslie Reinhardt at the Northwestern State Bank on Thursday evening with a baby shower. All enjoyed refreshments, games, and gift time. Leslie and her husband Stacy Reinhardt are expecting their first child to arrive August 28th. The event was cohosted by Penny Hardy, Karen Theaker, Jeanette Avery, and Donna Erher

Dick and Sherry Moore, newcomers to the Boyne area, hailing from Port Huron, to be at home here on N. Park Street, were the winners of the 4th of July "Bushels of Fun" raffle of the Xi Gamma Sorority. The couple won the two baskets of groceries. All proceeds of the sorority's fund raising events go towards supporthe many charitable ting organizations of the community throughout the year. What a fun way to share and care!

On July 7th, approximately 60 of the Christensen-Vought family gathered at the Bill and Lynda Christensen home for a fun time reunion. All enjoyed many outdoor activities, lots of good food and visiting. Among those attending were Harold and Nan (Vought) Crummer of Florida; Mark and Linda Christensen and family of Connecticut, (Mark was also here to attend his 25th BCHS class reunion); Ted and Delores Christensen of Grand Blanc; Louise Giem and family of Boyne Falls; Bob and Kathy Christensen and family of Rockford; Denny and Betty Christensen and family of Boyne City; Don Vought and sister, Barbara Vought Towler and family, all of Jackson; Tim and Lynn Goodwin and family of Grand Rapids; Terry and Tootsie Goodwin and family of Brutus; and Merla Vought of Boyne City. Included in the activities of the day was a special celebration of the 50th wedding anniversary of Harold and Nan Crummer, at which time the family presented them with a gift of a beautifully engraved clock. Their next family reunion is being planned for July 7,

Edward Szczepaniak of Elmira died July 12 and funeral services were Monday, July 16 at St. Thomas Church in Elmira. He was a brother of Bea Howard of Boyne City.

teachers, and just plain good old friends, Paul and Dorothy Pfahler are here from Zapata, Texas. They are staying in lot 54 at the East Jordan trailer park and plan to be visiting in the area for a couple of weeks.

Former resident Frank Abbett of Florida is here for the summer visiting his daughter and son-inlaw, the Jack Rayders.

Sam and Evelyn Chipman, Bud Sabin, and Pat Kubesh of the Boyne Country Region AACA (Antique Auto Club of America) joined surrounding area members in attending the Houghton Lake show on Sunday.

On Sunday afternoon, over 150 attended the 1st Magee family reunion held at the Hudson Twp. Hall. The many descendents of the Emerald and Clara (Day) Magee, the Royal Magee family, and the Marshall Magee family came from Missouri, Grand Rapids, Lansing, DeWitt, Utah, and many other states, as well as the surrounding communities for this event. They enjoyed a potluck and getting reacquainted, as many had not seen each other in 30 years. As the Magee family originated in Boyne Falls, and very near the Twp. Hall, in the 1800s, each had a story to tell, after introducing themselves and explaining their place on the Magee family tree. All was recorded in the beginning of a history book and a great time was had by

Ann Ward, accompanied by her mother Peg Spencer, attended a family reunion in Cadillac over the weekend. Peg will be spending a few days in the Cadillac-Frankfort area visiting relatives.

George and Judy Shiotellis spent the weekend in Marquette visiting her mother, Helen Elder, and to attend Judy's 30th reunion of the John D. Pierce High School. Mrs. Elder made the return trip with them and will be spending the remainder of the summer here.

The annual Gaunt family reunion was held this past Sunday at Whiting's Park with a good turnout of relatives from several Michigan cities.

Cristy and Louanne Davis of Jackson were here over the weekend visiting relatives in the

Dale Hoyt of Reading was here for the week visiting his sisters, Bill and Jean Korthase and family and Shirley Sassin of East Jordan.

Around 400 guests attended the wedding of Rebecca Palmiter and Pat Harmon on Saturday at the Christ Lutheran Church and the reception at Chandler Twp. Hall.

Scores of the Boyne senior bowlers were: Pearl Frieden-309, Krussell-331, Jack Mildred Sheldon-342, Marion Farr-348. Pros Blanckaert-353, Nyle Gould-362, Clara Kimble-365, Bob Rumfelt-375, Beverly Dyer-376, Jan Krussell-380, Jean Marcham-382, Ken Dyer-383, Cleo Davis-409, Betty Speigl-413, Norm Ramsdale-425.

Ardyth Dorgan-443. Winners of Thursday's bingo games at the mealsite were: 1st regular-Evelyn Stebbins, 2nd Barbara Ross, and 3rd-Rose Reinhardt. The 1st special went to Evelyn Stebbins and the 2nd, a 3way split-Clara Sutherland/Rose Reinhardt/Mary Towne. The cover all went to Mary Towne. All games were called by the "Lovely, Ross...Boy, Lyle somebody's really getting carried

Consumers suggests ways to keep cool

With the dog days of summer approaching, Consumers Power Company is offering suggestions to customers to help them keep cool while conserving their energy

dollars. "Hot, humid weather can cause your appliances, especially cooling equipment such as air conditioners and refrigerators, to run longer than they need to," says John Hadder, Area Manager for the utility. He offers commonsense tips to minimize the effects of heat and humidity:

-Run major appliances such as dishwashers and clothes dryers at night or early in the morning when temperatures are cooler to take

advantage of natural ventilation. -Keep direct sunlight out by closing drapes, drawing blinds or using awnings. This will keep inside temperatures lower.

-Lower the temperature setting on an electric hot water heater to reduce the consumption of one of the biggest household electricity users.

-If you have a window-mounted air conditioner, close off furnace registers to prevent cool air from escaping into the basement.

-Close off rooms not in use

during the day, such as bedrooms. Open them an hour or two before bedtime to allow cooling to circulate.

-Consider installing an attic fan and running it at night to draw hot air from the house, thereby creating a breeze effect while you

BOYNE CITY

The Humble Farmer

BY ROBERT SKOGLUND The Cultural Cente

One of the great things about living in the 20th century is the easy way we can get around. Nine hundred years ago Peter the Hermit might have inspired one's ancestors to travel in Europe, but there was a lot of fighting, murder and robbery in those days, and from what I've read, those who staved on the farm were better off than their curious neighbors who yearned to gad about.

Today, however, it's no big deal to travel 200 or even 2,000 miles for a weekend. Two hundred miles is a simple four-hour drive on our new network of interstate highways, and a 2,000 mile plane ride takes no longer. Nowadays rural people need not look and feel like country bumpkins. A. couple of hours in the family pickup brings them to the nearest cultural center. Ours happens to be Boston, where one can easily find a 17dollar parking space in the basement of Copley Square and then relax and do the town.

Those who have sought out culture before know that door locks don't mean much in cities, so they do not leave anything of value in their cars. CB radios and radar detectors - anything that might be unscrewed, as a matter of fact-are unbolted the day before and left on the farm. This is part of the price of acquiring culture, but for those who occasionally need to experience the finer thigs in life it's

Our rural visitors are now in the cavern jammed with cars and a few out-of-town pickups beneath Copley Square. There is an elevator which will bring them up to the shopping mall where they can sit for awhile and watch the people swirl by. They have an hour to kill before the movie starts.

We pause here, however, because the people involved must not be named. This doesn't usually bother me, but in this case I've been told it better— if I know what's good for me. So let's call her "Ida" and him "Olle."

To Continue, Ida and Olle no sooner plunk themselves down on a bench right there in the heart of the hustle and bustle of that great, big beautiful shopping mall at Copley Square, when along comes a big black guy who puts his foot

through a plate glass window and reaches in and takes out a jacket. Ida is somewhat surprised, even though she's been to Boston before. "There is a police woman standing there with a little radio on her belt," Ida says, "but this fellow doesn't pay her no more mind than if she was a fencepost, and starts to saunter off with the jacket under his arm just as unconcerned as if he did his shopping like that every day. There are other people besides us watching, too, but nobody gets in his way or acts like anything's amiss.

"The police woman was on her little radio while he was doing his fancy footwork with the window, and before he's gone too far she's got three big policemen there. Can you believe this character with the coat simply tries to walk out around them just as if he's got something very important to do? Anyway, he's not about to give up the coat, so they try to take it from him, and I'll be darned if they don't tear that brand new coat clean in

"Well, the police can't talk him into going along with them quietly so they wrestle him to the ground, flip him over, and snap the cuffs on him. By this time there's a small crowd standing around watching and he's making loud noises about how the cuffs hurt. Some woman who's seen the whole thing chirps, 'Wouldn't he make a good ad for that little radio they're always trying to sell to old people on TV? You wear it around your neck and when you get in trouble it says, "I've fallen down, and I can't get

up."
"A few other black guys have showed up and they're asking why the police are hurting their black brother on the ground. I could see it wouldn't take long to start a race riot if you went about it right.

"Olle and me got out of there. Outside, on the street, there were little pink papers under the windshield wipers. One was on the sidewalk and Olle picked it up to see what it was. It said, 'My name is Monique and I'd like to love you. Wouldn't you like to love me, too? There was a telephone number with it. No, we turned right around went straight home. Olle figured we could only handle so much culture in one day."

etters

Proud of Boyne at prom

To Whom It May Concern, On May 5, 1990, our studio photographed the Boyne City High School Prom in Gaylord. We were so impressed with the students, we just had to write and let you know. Not only were they cooperative, but they were very well mannered and polite. Naturally, we come across a lot of nice students, but it is always a

pleasure to photograph an entire school where each and every student is a pleasure to work with. We truly enjoyed working with your school Considering this, we felt obliged to write and commend the Board of Education. Please accept our apologies for this letter being long overdue.

Remembrances

The beginnings of the cement business in the area started in Bay Shore when this cement making facility was set up about the turn of the century. Limestone shale was crushed, made into a slurry

urge, you know.

and then kilned in the process of making cement. At least that is what the back of this picture said.

BY JIM SILBAR

"Some day, 'Pow' right in the kisser," a long ago memory of Jackie Gleason's Honeymooner television show came back into my memory a short time ago. Why? I don't know. Just those random thoughts that occur to oneself as he goes through life.

I think I remembered that phrase after breaking or finding out two of the office cameras were broken. One on the Fourth of July and other discovered this

The thought was that as you try to get ahead, there is always something that will hit you in the face and take away any money you were saving up. Now I will have to spend an untold amount just to get the cameras fixed.

I had planned on being able to spend that money frivolously. Like buying some pistachio nuts, some junk food, and maybe even some gas for the car.

As everyone knows, you just don't make enough money to meet the expenses you incur.

I imagine if I were to win the Lotto, all 21 million or so, I could quickly find a way to spend 22 million. And I don't think I would be alone with that thought.

We Americans are experts on conspicuous consumption. We need more things than we will hardly ever use or than the rest of the world can only imagine.

Like when I was waiting for the other members of the family at a mall several weeks ago.

I felt that I had to spend some money also, just to match up with what the others were spending.

So not wanting to buy clothing, shoes or anything important, I went into the gourmet junk shop. The one where you can buy all kinds of kitchen appliances, knicknacks and such.

I figured that I really did not need an electric wok, or a baby sized fryer. I ended up with a purchase of a french fry maker.

This french fry maker just has to be the greatest little invention of the modern world, according to the manufacturer. After reading the box with all of the information, I plunked down my ten bucks and walked out of the store with the new purchase.

The rest of the family came up with bags of clothing, shoes, and other real necessities of life. I didn't care, I had my exclusive french fry maker.

I then had to endure the wrath of the others in the family as we packed up the car to head home.

"A french fry maker," one said with a sneer, "You know that eating greasy foods like that will So I endured.

"Buffet and Refreshments"

Falk Schimmann ends year with Evans family

The past year has seen almost unbelievable changes in world events, bringing us all much closer to the idea of a truly international community. The Jeff Evans family has entered that realm as host family to West German exchange student, Falk Schimmann. Schimmann spent his senior year at Boyne City High School experiencing the life of an American teen.

Darla Evans is not a newcomer to hosting an exchange student. "My parents had an exchange student when I was young. It was so interesting then, that I thought it would be a good experience for

The Evans found little difficulty in adding another teenager to the fold but did have to work out a communication problem. After six years of study, Falk speaks fluent but formal Queen's English. "It took a lot of explaining to work out the difference in language," says Darla.
"He had to get used to American

Schimmann hails from Bremen. an industrial city of 700,000, where he lives with his parents and sister. Falk's father is a teacher and his mother is a pharmacist.

As a city dweller, Falk learned the real meaning of culture shock on the Evans' 250 acre cattle farm. "I had never done any farm work before, but here I took care of the cows and helped with the haying," he says. Did this earthy and physically challenging experience change his career plans? "It has definitely made me not want to go into farming," he laughs.

Falk cites several differences between U.S. and German school systems. In Germany, he takes 13 classes for the entire school year and must complete 13 years before going on to college. While he found the American school system less challenging, he liked his teachers and most of his classes. "I progressed in English, Biology and Math," he says.

Falk participated in track and football in Boyne City, which differs considerably from the citywide sports clubs of his home town. He also attended the prom, his first formal dance. "We go to dance clubs in the city because we don't have dances at our schools, especially formal ones," he says.

Another difference noted by Falk was the love affair that American teens have with their cars. "In Germany, we don't get our licenses until we are 18 and then we have to wait a long time because it is so expensive." American teenagers are notorious for driving anything that rolls, something not seen in his country. "You can't have all those old cars on a road like the autobahn where people drive 120 miles per hour," he says. "The crazy ones will even drive 160."

Dress codes are nonexistent in Falk's German school. "Here the students can't wear ripped jeans so many people will try to get away with it. In Germany, we can, so no one cares to try."

But music, the universal language, is not different. "We have the same music and a television show similar to MTV," says Falk. "If something is popular here, it is popular at home.' The telephone seems to be

another area where teens of all nations are the same. While Falk says that he was homesick only for short periods of time, he did make weekly phone calls to his home. At first I'd talk for ten minutes, then 20 minutes, then 30 minutes; the bills kept getting bigger," he says with a smile. "It was worth

and school, the most remarkable and portentous changes were happening in his own country. He admits that he sometimes felt sorry about missing out on the excitement. "Germany is so small, it is hard to believe how important it is now. It's so hard to describe the wall and the mine fields. You have to see it to believe it."

The Schimmann family has relatives in East Germany so they know firsthand the pain of division. They are positive about the progress their country will now

If our government had made the changes, it would have gone slowly, but the population of East Germany wanted freedom now; they couldn't wait," says Joerg Schimmann, Falk's father. "Many people will be unemployed at first, but there is so much work to be done. West Germany must give

Refunds to go out to Top o' Michigan members

A total of \$1.5 million in patronage capital will be refunded July to about 35,000 Top O'Michigan Electric Co. members. Some 7,000 former members will receive part of that total too.

This year's total includes more than \$1 million going to members who received electric service in 1982 and about \$434,000 to be refunded to members who received service in 1989.

The 1989 refund is a portion of the total amount due members in

that year.

Individual refund amounts are based on total billing payments made to the cooperative during 1982 and 1989 by each member.

When an investor-owned utility shows a profit, it's returned to their investors through dividends. But what happens to money earned by a not-for-profit electric cooperative? Instead of dividends. patronage capital refunds are returned to members of the cooperative. Patronage capital is

money earned over the actual, operating budget which is returned to the customers who are the cooperative's member-owners.

This is the seventh refund in as many years. In that time, Top O'Michigan has returned \$9.1 million to members who received service any time during 1963-1982 and 1984-1989.

Top O' Michigan serves more than 40,000 members in 12 counin northwestern lower

Region blood supply not at risk says Red Cross

The American Red Cross Wolverine Region's blood supply continues to increase its safety. The Region headquartered in Flint reports that there have been no known cases of transfusion associated AIDS within the region according to Dr. Willys F. Mueller, Director of Blood Services for the Wolverine Region.

A recent article in the Philadelphia Inquirer cites a Food and Drug Administration inspection of the American Red Cross National Headquarters in Washington, D.C. The focus is on National the reporting structure mainby the national organization. Much of what has been written in the article does not pertain to the Red Cross blood center that serves most of the hospitals in central and northern Michigan (Wolverine Region).

The Wolverine Region has been inspected by the State of Michigan and has a license as a clinical laboratory. The Region is also inspected by the American Association of Blood Banks and most recently the Food and Drug Administration at our Petoskey location in February 1990 where

there were no citations

There has been a great deal of progress in recent years toward making the blood supply in the United States safer than it has ever been. Emphasis on the use of one's own blood (autologous transfusion), the development of more effective blood donor screening methods, and the introduction of new tests for the AIDS and hepatitis virus have effectively diminished the risk of transfusion associated disease transmission. The newest test, the Anti-HCV for Hepatitis C, was licensed and implemented this spring.

The Wolverine Region has a full time compliance officer who is explicitly charged with maintaining the highest quality and as safe a blood supply as possible and assures that all activities comply with and exceed FDA regulations and directives from the national organization. The risks are minimized through the voluntary donation concept that assures the safest possible method of collection in conjunction with extensive health history questioning and testing. New screening questions will be asked of all

donors in the near future. These new questions are very specific about types of high risk behavior.

The Wolverine Region services 36 hospitals in 27 counties in central and northern Michigan and is one of three American Red Cross Blood Services Regions in the state. The Wolverine Region collected 63,033 units in the FY 89-This summer presents an op-

portunity for healthy volunteer donors to ensure an adequate and safe blood supply, "The Region needs donors, repeat and first time, adequate to cover the summer needs generated by the hospitals. Red Cross inventories of blood and blood products must remain at a level to meet the ongoing needs of the patients," states Mueller. As the Wolverine Region begins the summer period, it already faces a deficit in types O and B positive and O, A, and B negative. To help increase donations, the Red Cross is looking for new sites and/or organizations to sponsor a blood drive. Donate blood today and help someone else enjoy the summer.

Burns Clinic sets up self-help workshop

demands the patient's active participation. To be actively involved. the patient must be well informed and knowledgeable about the

ARTHRITIS: A SELF HELP WORKSHOP is being offered by the Burns Clinic Foundation on Wednesday, August 29 at 1:00 p.m. in Northern Michigan Hospitals' Auditorium. The Gamble workshop is designed to promote a better understanding of the disease, both for those who have arthritis, and those who care for

Arthritis is the inflammation of a joint, and refers to more than one

hundred rheumatic diseases. Symptoms and causes vary with each one. The aim in treating arthritis is to relieve pain and stiffness, to stop' joint destruction from inflammation, and to maintain mobility of joints.

How do you know if you have arthritis? Any recurring joint symptoms, lasting longer than 6 weeks, should be checked with a physician, no matter how mild or temporary.

The program is free, but space is limited. To register, call the Burns Clinic Department of Health Education and Nutrition, 616-348-

by Gail Ware Ware-withal

There is something in the American character that makes its people willing to eat sorghum and soybeans in place of steak and saugage, apples instead of ice cream, and give up other fat foods that filled out their billowy bodies. Yet they take scant interest in deliberate exercise, except to appear everywhere in the cute costumes designed to do it in.

Meanwhile, health experts continue to preach that regularly engaging in aerobic activity, something vigorous enough to work the heart and lungs, beats fat and calorie counting for physical fitness - the most effective damage control weapon against the clear signs of growing older.

Perhaps the famous Cher, appearing so often on TV looking lean as a teenager and yet undeniable not one, has given people the idea that controlling the amount of fat they eat will lead them to the fountain of youth. That she's advertising Vic Tanny, a place where people work out, move about - exercise - and says she keeps her body in the shape it's in by doing same, must not register in viewers' minds. Or. they figure they can't do it all, and eating beans and grains is a noble try and also less sweaty.

Cutting fat calories, following good nutrition rules, makes people look and feel better and get healthier. But only exercise will slow down the process of lean muscle being replaced by fat, and bones and connective tissues drying out and stiffening; in fact, it will perk up most parts that don't work as well as in the springtime

Besides, nutrition is an inexact science. Even with a trained nutritionist watching every bite, she can't tell within 300 calories how many a person pops per day. This bit of news was reported recently, a shock too, in light of recipes now coming out with decimal points, yet; a recipe for lime cookies appearing in the newspaper Sunday claims each contains 59.63 calories, for heaven

Considering the confusing calorie picture and clear evidence that exercise is more important anyway, no wonder medical men now say that we're less what we eat than what we do. So they push calorie counters to just get

To encourage exercising among those who'd rather not, health spas are offering slow-paced, half hour sessions for those intimidated by high powered aerobic movements. They've attracted some people but probably not as many as studios like New York's Pollen-Austen that offer a variety of classes for those who hate exercise. Caren Austen speaks of her Cardio Rock class as catering to "closet dancers", and says of this new approach to exercise:

"We're tapping a variety of avenues for all different kinds of people. The point these days is having fun.'

Perhaps she's found the answer to getting people to exercise. It's not that they don't believe in the concept of physical fitness now. But many can't see how forcing already weary bodies to do more to tire themselves out can do them any good. Calling it fun puts it in a different light. They believe in fun, carefully planned fun too.

Take vacations. They firmly believe in their value, devote months of thought and energy to arranging for, not to mention money poured into, these occasions. And everybody knows that vacations are about having

This may be the ultimate answer then: fitness equals fun, and off they go. It's an odd, circuitous way to get people to do what's good for them. Still, if it works, doubtless many both at home and abroad will shrug and observe that it's simply another case of - Only in

Bowman remembered as civic booster, merchant

The death of Florida Kaden Bowman on May 14, 1990, brought to close a long and productive life as daughter, wife, mother, business woman and indefatigable Boyne City booster.

A lifelong resident of Boyne. Florida was a 1929 graduate of Boyne City High School and a 1933 graduate of University of Michigan. She became the city's first female pilot in 1938.

In 1940, she and her husband, Ira, bought her father's store. Kaden's, which was the town's oldest business dating back to 1903. The Bowmans worked hard, prospered and raised two children. When she sold Kaden's in 1972, she immediately started planning a new gift shop, The Coffee Mill, which she operated until her recent illness forced her to stop.

At the time of the Kaden's sale and the opening of her new shop, she told a reporter, "You can't be in business all your life and then just quit. You'd go nuts... or nut-

This sort of no-nonsense, matterof-fact statement was Florida's trademark, but she will also be remembered for something else: there is a common thread that runs through the memories of people who knew her, that being her uncommon generosity.

"She did things for people very quietly that no one ever knew about," says longtime friend, Marian Skop. "Florida would be very upset if she knew I was telling this."

Mrs. Skop worked in Kaden's during the 1950s when it was operated by Florida and her husband. In the mid-fifties, a very large family was burned out of

Florida Bowman was fondly remembered by Boyne City residents. Rather than show a picture of her taken within the last few years, some might better remember her high school graduation picture. Florida died recently after spending many years on several civic and community

their home with nothing left but their nightclothes. "After the store closed for the day, she had the family come in and she outfitted them in everything from shoes to winter coats," says Marian.

Mrs. Skop also tells of the time a woman came in to buy a coat for her daughter. The woman cleaned offices for a living and couldn't afford the coat her daughter had picked out. "Florida quietly got me into the office and told me to put the coat on sale," Marian says. The woman paid it off at a dollar a week."

The hard working and poorly paid tannery workers also frequented Kaden's where they would buy things for their children. "Florida would not allow us to send monthly statements to the tannery workers," Marian remembers. "The men just paid a little bit at a time."

Florine Harper of Boyne City

Bowman's kindness. Mrs. Harper started working for the Bowmans when she was in 6th grade, first in their home and then in the store.

They always encouraged me and made me feel good about myself. Florida told me that she would finance college if I wanted to go, and she paid for my nursing studies for three years in Lansing, Mrs. Harper says. "I don't know what would have happened in my life if Florida hadn't helped me, and I often wonder how many other people she helped that we don't know about."

Florida's cousin, Mrs. Vera Clevenger, agrees. "She did many, many nice things for people but she never acted like it was anything at all."

Florida may have been secretive about her generosity but she was always willing to share her knowledge of business. "She

was way ahead of her time as a business woman," Mrs. Skop says. 'If a store went out of business in town she would start stocking the items that it used to carry just to keep people shopping in Boyne

Her dedication to Boyne City and its people was manifested in years of public service on the Chamber of Commerce and the Boyne City Historical Society, school board and planning board.

"This community meant a tremendous amount to her," says her daughter, Patti Hamilton, of Shoshone, Idaho. Likewise, Florida meant a great deal to the community. "To steal someone else's words," says Patti, "she was the grand dame of Boyne City.'

The Bowman family will accept an award in Florida's honor for her 15 years of dedicated service on the Boyne City Planning Board.

Planners deny requests

Continued from Page 1

concerns when Jim Knurick, a member of the planning board said that anytime the city could reduce the density in an area, it should as he made the motion to approve the request. Andy Place, a resident of the area asked that it be denied as there are other factors that should be considered. Others in the audience told the board that 80 foot lots would be ideal for the site. The planners then voted to approve the split and sent it to the City Commission for final approval. The Commission denied the request, however, as they found between the time of the planning meeting and the Tuesday noon meeting, the minimum lot size for the R-1 zoned district was bigger than the proposed split. The minimum lot size is 11,000 square feet.

Another density factor resulted in the denial of a preliminary site plan to build three duplexes on the former Watkins property on Front Street. Forrest Milzow presented the plan to the board saying that he was the builder contracted to provide the structures.

Big Rock gets good report card

Consumers Power Company's Big Rock Point nuclear plant has received a new "report card" from the U.S. Nuclear Regulatory Commission (NRC) and it gives the plant good grades, with improvements noted in two areas and no rating decline.

The report card is the NRC's Systematic Assessment of Licen-Performance (SALP)-a document which rates seven areas of plant regulatory performance over a 16-month period from January 1, 1989 to April 30, 1990.

Three of the seven areas covered in the report received the NRC's highest rating—category 1—indicating, "Licensee 1-indicating, "Licensee management attention and involvement are readily evident and place emphasis on superior performance of nuclear safety or safeguards activities, with the resulting performance substanexceeding regulatory requirements." The three areas receiving the NRC's top grade were plant operations, emergency preparedness and maintenancesurveillance, which improved from

the previous reporting period. The remaining four areas received category 2 ratings, indicating, "Licensee management attention to and involvement in the performance of nuclear safety or safeguards activities are good. The licensee has attained a level of performance above that needed to meet regulatory requirements." The areas that received these good grades include safety assessmentquality verification, which was noted to be on an improvement security, engineeringtechnical support and radiological controls. While the radiological controls rating is unchanged from the previous report card, the NRC noted a decline and said additional management attention is appropriate in this area.

No areas received a category 3 rating, indicating, management attention to and involvement in the performance of nuclear safety or safeguards activities are not sufficient."

The planners reviewed the request, working through each phase. They were told the new construction would be lower than what is presently on the site, that

said that the project would be a great improvement to the area. As the planners went through the criteria, it seemed that everything was okay until they

reviewed the density the request

garages would be entered off of

Elm Street, construction could

start as soon as this fall, and would

be frame and cedar siding. He also

would have on the property. When it was determined that the duplexes would be 36 feet too much for the size of the lots, the developer told the board he would reduce the size. A question arose concerning whether the proposed decks on the buildings would be included into the amount of space the units would take up on the land, the developer told the board that the decks were not included in

the figures. That led to some discussion as one part of the ordinance said decks should be included and another part said they were not. The planners were going to leave the decision covering the decks up to the Zoning Board of Appeals until they figured out the density of the three duplexes would be greater than what was allowed in the R-2 district.

The density of the duplexes figured out to 11 units per acre, more even than the allowable amount for R-3 zoning.

It was pointed out to the board that another duplex on the same street exceeded the allowable footprint on the lot it is constructed upon.

That brought up a remark from a resident asking the board to deny the request saying that the board should not make another

mistake. With that thought, the planners moved to deny the request, even though they had agreed on all of the points until the density issue

came up. In the denial, the board brought into consideration the other duplexes in the area, including the Harborage Condominiums. They thought the area was getting overcrowded and based the denial on that factor.

In other action, Dave Seeley asked the planners if they intended to make a decision covering the proposed One Water Street Marina project. He was told that since the city had taken a stand on the issue, and since the planning body was subservient to the comstand missioners. no

Planning Board Chairman Bill Casper said that any action by the city supercedes the board, and that if board members wanted to send letters voicing their opinion, they could and should.

After one meal with french fries, the machine got put away and I have not seen it since.

Seems several people in the family don't want me to enjoy my purchase.

with Bea Smith

Not many years ago, cooking a chicken dinner was practically an all-day affair. When Grandmother had to kill, pick off the feathers and dress it; does anyone remember how she scorched off the pin feathers with a burning rolled-up newspaper? Then she had to cook it until tender which took some time if the hen or rooster was old and tough.

Before frozen chicken came into our markets we were concerned about just how fresh a chicken was when we bought it. I remember during my early married years going to a market on N. Saginaw St. in Flint for chicken. They brought the live chickens in crates. You could choose one, they dressed it for you and you knew that it was fresh. We thought that was real service.

All through the years I have wondered about all the recipes calling for two cups of cubed cooked chicken. I never seemed to have any left over. We liked the cold chicken for a snack even more sometimes than the first time around. We do not have that problem any more, we buy just want in any amounts. Most of the time-consuming work is now done for us and the meat is always tender and cooks quickly.

Chicken has always been a menu favorite whether it's roasted, fried combined in a casserole, salad or soup. It is traditional picnic food. For this first recipe you can remove most of the skin if you wish, the pieces will still be crusted. This could be your company-best chicken. They will rave about the crispy pieces topped with a broiler-browned cheese sauce.

CHICKEN MORNAY 1 ready-to-cook frying chicken (3 lbs.) cut into serving pieces.

1/4 cup lemon juice 1/2 cup fine cheese cracker crumbs 1 teaspoon salt

1/2 teaspoon paprika 1/3 cup shortening or vegetable oil

Mornay sauce*
Rub chicken pieces with lemon juice. Combine cracker crumbs and seasonings and coat pieces with mixture. Brown chicken pieces quickly on all sides in hot fat in heavy skillet. Cover skillet, reduce heat, and cook slowly for 35 to 40 minutes until chicken is forktender, turning pieces occasionally. Arrange chicken pieces in oven-proof dish. Pour Mornay Sauce over chicken and broil until golden

Sprinkle with chopped parsley, if desired.

Serves 4 to 6. *MORNAY SAUCE 1 can cream of chicken soup 1 can (31/2 oz.) mushroom pieces, undrained

¼ teaspoon paprika 1/4 cup butter or margarine 2 egg yolks, slightly beaten 3 tablespoons grated sharp process

1 tablespoon crumbled blue cheese, optional

In saucepan combine soup, mushrooms and liquid, paprika, and butter. Heat until just boiling. Stir a spoonful of hot mixture into slightly beaten egg yolks. Carefully stir yolks into hot mixture. Heat for 2 minutes longer. Remove from heat and blend in cheese. Use as directed on Mornay

Next is a delicious chicken salad. It will serve 4, however if you want to make it for 1 or 2 you can halve the recipe. This is the kind of recipe of which I used to ponder and sometimes just skip over. "Who had 2 cups of cubed chicken on hand?" It is easy now to have all of these ingredients at one time. If alone, I will use the canned chunk

CHICKEN SALAD HAWAIIAN 1 (8 oz.) pkg. Philadelphia Soft cream cheese with pineapple 1/2 cup plain yogurt

2 cups diced cooked chicken 1 cup red or green grapes, halved 1/2 cup celery slices

1/2 cup Macademia nuts, chopped 1 cup flaked coconut, toasted

Mix cream cheese and yogurt until well blended. Sir in remaining ingredients. Serve on a lettuce leaf or a hollowed-out pineapple half, if desired.

The Surgeon General recommends controlling fat intake this way: Eat more fruits, vegetables, whole grain foods, lean meats and low-fat dairy products. This recipe was developed with this in mind. From Del Monte Co.

CALICO CHICKEN 3 boneless half chicken breasts, skinned and sliced

1 medium onion, chopped 2 cloves garlic, minced 1/2 teaspoon thyme, crushed 1 tablespoon olive oil

1 can (17 oz.) new potatoes, drained and cubed

1 can (16 oz.) mixed vegetables 1 can Original Style stewed

tomatoes, no salt added, 14 oz. size. In large skillet, cook chicken, onion, garlic and thyme in oil until chicken is done. Add remaining ingredients; bring to boil. Reduce heat and simmer, uncovered 10

with Parmesan cheese if

Honeybees endangered

Within the next five years, wild honeybees may disappear from Michigan.

That could be a disaster, says Michigan State University expert honeybee Roger Hoopingarner.

At stake is the pollination of 100 Michigan crops that depend on honeybees — wild domestic-for bountiful yield and quality. As helpful as domestic bees are, they cannot do the job of wild (feral) honeybees simply because there aren't enough of

Some of the more important bee-pollinated crops in Michigan include apples, blueberries, cantaloupe, carrots, tart and sweet cherries, alfalfa and other livestock feed crops, cucumbers, peaches, pears, plums and strawberries. Their total value exceed \$567 million annually.

The deadly threats to both the feral and the domesticated honeybee populations are varroa and tracheal mites.

The varroa parasite migrated from the Soviet Union to Europe in the 1940s and was later inadvertently transported to the United States, where it was first detected in Wisconsin in 1987. It has now reached Michigan and 80 to 40 other states.

"Because varroa mites can destroy entire bee colonies, they pose a serious threat in the next three to five years to most of Michigan's agricultural industry, Hoopingarner says.

"They have killed all unmanaged feral colonies in Europe during the past 20 years. Half of Michigan's bee population is wild, so the impact could devastating," he explains.

Recent studies show that 80 percent of bees in an apple orchard are feral bees, he notes, and the value of wild and managed bees as pollinators is more than 40 to 50 ercent higher than the value of the honey they produce.

Hoopingarner evaluates Michigan's fruit industry alone at \$198 million annually. He believes growers can avert a substantial loss by substituting managed bees for feral ones.

"The situation is serious under the current management scheme, but the shortfall can be corrected by renting managed bees. However, there will be no additional managed colonies until there's a market, which will occur when growers recognize that their crops are inadequately pollinated,"

Reg Sharkey's Northern Journal

Those pesky honkers

BY REG SHARKEY

Who would have believed a few years ago that Canada geese would become pests? But that's just what's happening

in areas of Michigan, especially around the Straits.

It wasn't too many years ago that a goose per day, in a shortened season, was the bag limit.

Like famine to feast the proliferation of the majestic birds is causing problems to farmers, and especially lakefront property owners.

Perhaps the honker problem around these parts can be directly laid on the DNR's doorstep.

If I recall correctly about five or six years ago the DNR trapped Canadas in the southern part of Michigan where they had become pests on overcrowded, overdeveloped lakes, Oakland County being one of the areas.

Lakefront owners being taken in by a few Canadas encouraged them to partake of food generously supplied. It was great stuff to play host to the elegant birds. Eventually the birds become semidomesticated, repaying their homan hosts with gosling proliferation.

Soon they began to wear out their welcome. Lawns became pock-marked with generous dollops of goose dung. Barefooted bathers played hopscotch trying to avoid the messy "muffins."

Pressure on the DNR resulted in live trapping the offenders. Some were marked with numbered, colored neck bands, and were transported to the northern part of the Lower Peninsula and released, hopefully where they would be welcomed and bolster a huntable population.

Well, by golly, that's what they did, only too well. Now we are experiencing the same problems as the downstate city people who wanted no more of the lawn dob-

In spite of an early season: Sept. 1-10, that's been in effect a couple of years now, the honkers are outdoing the waterfowlers, producing

more gosling than are eventually

Lakeshore dwellers along the Inland Waterway, especially Crooked and Pickerel Lakes are complaining about the nuisance the semi-tame geese are becoming.

But some of the complainers have only themselves to blame. And when the special season in early September comes along most of those same complainers object to hunters harvesting the proliferating, lawn fouling geese, yet want the DNR to do something

Live trapping the honkers and transporting them to another area would only be transferring the

So the only logical solution to the problem is a longer special season with larger bag limits, getting the lakeshore dwellers to encourage hunters to take the offending geese in a legal and safe manner from the areas where the congregate.

P.S. (Political Salute): Very seldom do I write an endorsement for a person seeking public office. But this exception I do willingly with heartfelt support for William (Bill) Huber, Republican candidate for State Senator for the 37th District

I've known Bill for a good many years, ever since he was the right hand man of then State Senator Bob Davis for two years (1977-78);

and when Davis went to Washington as Representative of the 11th District (the largest in the State) Bill took charge as District chief in Davis' offices spread all through the sprawling 11th District. Bill did a lot of traveling and as Davis' representative listened to the people and their problems that needed assistance at the Federal level, relaying the information to Davis in Washington. In retrospect it was, and could be, a pipeline from our Senatorial District to Rep. Davis in Washington.

Surely Bill has a first hand knowledge of the people and their problems in the 37th State Senatorial District.

I personally have had prompt and courteous replies to some of my problems when they were relayed to Davis in Washington; and I know Bill is vitally interested in environmental problems affecting this area.

All in all, Bill knows the people of the area much better than his opponent, and also their problems, and Bill isn't depending on campaign money coming out of Lan-

So, when election time rolls around in August your vote for Bill Huber will help get us a State Senator who knows the people and their problems in the 37th State Senatorial District.

There were plenty of geese at this campsite making out for the goose droppings as they walked around the pests of themselves. Sharkey says they were looking site. for handouts from the campers who also had to watch

Conservation District to have humorous meeting

The Charlevoix Soil & Water Conservation District is holding their 42nd Annual Meeting, July 24th at Whitings Park.

Each year the district puts on a dinner and holds a business meeting at which directors are elected for three year terms of office.

The meal this year will be Swiss Steak, at a cost of \$3.00 per person. Reservations should be made in advance by calling 582-6193 or 582-7341

The speaker provided the following introduction: He hails from a small town in northern Indiana where the biggest business in town was a large Avon lady. His grades in college were no better than Dan Quayle's, but he was captain of the freshman football squad for three years.

Walt Buescher speent a lifetime with Allis-Chalmers. He started toting company soil conservation films to meetings in 1939 and has worked with our people ever since. Walt has addressed over 100 conservation audiences including a

dozen state conventions.

Buescher ended up at Allis-Clalmers as Sales Promotion Manager and in that assignment was named agribusiness's Marketing Man-of-the-Year. The Bueschers now live in Pigeon Forge, in the Smoky Mountains of Tennessee, Walt has written two

FLOYD ALDRED BOYNE CITY MEN'S

books, one on meeting planning and one on humor. Get set for a little humor.

Please call ahead to make your reservations. Tickets will be sold at the door. Dinner is at 7:00 p.m., Tuesday, July 24th at Whitings

BC football players invited to work out

For all those football players, and those interested in football this coming fall, new coach Pat Klooster has announced that the weight room at the Boyne City High School will be open Monday, Wednesday and Friday between 8 a.m. and 10 a.m.

The new coach says he will be looking forward to meeting and working with those interested in going out for the team.

Too Small To Be Effective? You're Reading It, Aren't You

Bill Hawkins Joe Hawkins

06556 Camp Daggett Rd. Boyne City, MI 49712

No job too large or too small (616) 582-2307 Formerly B&B Rooting

rmy worm infestation could be worst in years

The armyworm is on the march throughout much of central lower Michigan. And it may be on the verge of reaching outbreak proportions.

Uncontrolled, armyworms can destroy an entire field of corn or other crops, says Doug Landis, Michigan State University Extension entomologist.

"We are advising farmers to be checking all of their crops immediately for armyworms and their damage," Landis says. "In some counties, such as Eaton, it is already at an outbreak level."

conditions Environmental during the past few months-a cool spring followed by warm weather—have been ideal for the development of the armyworm. It had not been a serious threat to Michigan crops for several years.

"Army worms are usually held in check by several natural enemies, including parasitic flies, wasps and diseases, but this year the armyworm population has apparently escaped its natural checks and balances," Landis says.

Depending on the population level and the vulnerability of the crop to armyworm damage, farmers may have no choice but to apply an insecticide to their crops, Landis says.

He says that, for the most part, farmers will use their own equipment to apply insecticides, but if a crop is being ravaged, aircraft may have to be used.

Currently the armyworm is feeding predominantly on plant leaves in wheat fields, but as the leaves dry the worms will migrate to other fields or begin chewing the heads off the wheat plants.

Landis advises farmers not to spray wheat fields unless the wheat heads are being clipped.

As the wheat crop matures, the armyworms will "march" to other fields. If the population is large enough, they will eat almost anything.

Landis says the time to treat corn at whorl stage is when three or more army worms are found per plant. If the corn is less than 10 inches tall, the threshold for

treatment is one armyworm per

Treatment of soybeans should be done if the armyworm has destroyed 40 percent of plant leaf surface, unless the soybeans are in bloom-then treatment should begin if 15 percent of the plant has been defoliated.

In dry beans, treatment should be made if 25 percent of the leaf surface has been removed; in alfalfa and oats, treat if four or more army worms are present per foot of row.

Landis says that the armyworm adult (a moth) lays its eggs in dense grassy areas and that the emerging larvae feed primarily on grasses, including grains and corn.

When they are small, armyworms are hard to detect because they feed primarily at night, hiding during the day at the bases of plants in the upper layer of the soil.

When armyworm population is high, however, the caterpillars may also feed during the day. The larger armyworms get, the more they eat and the harder they are to control.

In addition to wheat fields, Landis says that farmers should be checking fencerows and other dense grassy areas around fields for evidence of army worm feeding. Armyworm larvae usually feed on the margins of the leaves. Ragged edges on leaves, holes chewed in leaves, clipped heads of small grains and the pellet-shaped, dark green frass (excrement) are all signs of armyworm feeding.

It may be, Landis says, that early detection-while the caterpillars are small-will mean that just the border of the field will need to be treated.

The armyworm is a cylindrical, hairless caterpillar with brownish head, three pairs of small, jointed legs just behind the head and five pairs of fleshy legs.

Farmers should check with their county Cooperative Extension Service office for recommendations for treating armyworm-infested fields.

Letters

Continued from Page 3

consider and evaluate Water Street proposed One Marina and its impact on conservation. economics, aesthetics, historic properties, fish and wildlife, recreation, water quality, safety, etc., etc. These comments will also be used to assess the needs and welfare of the people, their concerns and the best possible utilization of our natural resources. A lack of response to this proposal will be interpreted as meaning that there is no objection to the permit application. It is therefore of the utmost importance that people take the time to put their views, opinions and concerns in the form of a written comment and let their voices be heard.

We would again like to review some of the major concerns of our committee, The City of Boyne Parks and Rec. board, WATCH (Water and Air Team Charlevoix), Eveline Township, and the more than 2500 people who signed our petitions.

Those concerns include: Public surface water being taken

for private use. 2. Loss of fish habitat - specifically walleye and bass spawning grounds that in their natural state are irreplacable.

3. Water quality—the potential for pollution and stagnation of our lake water from increased boat traffic and marina.

4. Public beach-declining water quality, swimming hazards and pollution could force closure of this

5. Riparian rights and rights of ingress and egress. There appears at this time to be some controversy over the interpretation of these rights, between the City and

6. Aesthetics - loss of one of our few remaining natural historic settings and the spectacular view looking down Water St. at Sunset. 7. Channel flow—this project could alter or reduce the flow of natural currents and affect the existing public marina, beach shoreline, and river outlet.

8. Density-currently there are 260 to 270 private slips, 40 public slips, and a heavily used public boat launch on less than 2 miles of lake frontage.

9. The Unknown-there are, certainly unknown factors which could affect quality of life, health, the lake and people and wildlife through adverse affects.

10. Public Opinion-it is increasingly apparent that the majority of local citizens and supporters from surrounding areas are very much opposed to this project for various reasons.

Please take action now. The deadline for this review process is July 28, 1990. Write letters to both the Army Corps and the DNR and put the file number on both your letter and your envelope.

The Save Our Lake Committee

Manager appointed at K-Mart

K mark Corporation has named James Cupp general manager of the new K mart discount department store at 06600 M-66, North, located in Charlevoix. The store grand opening is in July.

Cupp comes to his new assignment after serving as manager of a K mart store in Bloomington, Indiana. Prior to that assignment, Cupp served as manager in Decatur, Indiana.

A native of Huron, Ohio, Cupp joined K mart Corporation in 1969.

Regular store hours will be 9 a.m. to 9 p.m. Monday through Saturday and 10 a.m. to 6 p.m. on Sunday. Two wheelchairs and one electric shopping cart will be available for handicapped customers.

Once established, the new Charlevoix K mart will organize a Good News Committee. The Good News Committee consists of associates who volunteer their time to participate in "good works" activities in the local community.

Whether it's distributing food to some 42,000 needy families for

Thanksgiving; or providing more than 42,000 underprivileged children with a Christmas shopping spree; or raising approximately \$1 million in pledges for the March of Dimes to fight birth defects. K mart stores have a strong presence in their communities.

The new K mart will be under the supervision of Bill Gryson. regional manager of the K mart Regional Office, Midwestern headquartered Hoffman in Estates, Illinois.

The store staff will assure that K mart is alert to the needs of its customers. The employees are being trained to provide fast and

efficient service," said Cupp.

There are 126 K mart stores in Michigan including the new Charlevoix store and there are now approximately 17,200 em-

K mart Corporation serves America with over 4,000 retail outlets in all 50 states in the United States and in Puerto Rico

Boyne River to get lamprey treatment in July

The continuing battle against the sea lamprey by the U.S. Fish and Wildlife Service will soon come to the Boyne River, a tributary of Lake Charlevoix in Boyne City. If larval sea lampreys are detected in Porter Creek during surveys in late July, this stream may also be treated.

Sea lamprey control consists of eliminating lamprey larvae in streams flowing into the Great Lakes, thereby protecting the Lakes' fish populations.

A service crew of fishery biologists and technicians with experience in sea lamprey control from Ludington, will arrive on July 30. Initial work will include stream velocity and volume measurements, water chemistries, bioassays, and placement of conequipment, according to Robert Morman, Station Supervisor, of sea lamprey control at the Service's Ludington Biological Station. A critical study of stream flow patterns is done with rhodamine WT dye or a fluorescein dye (a material that turns the water a bright green). These dyes are nontoxic to people, fish, and wildlife.

This initial information is then used to determine the amount of lampricide (TEM) that will be applied to the stream during the treatment. Treatments will be conducted in July 30-August 3.

The lampricide selectively destroys lamprey larave, but is humans, pets, livestock, and other animals. A small number of resident fish may die during the treatment, for example, fish weakened through spawning or environmental stress, as well as other fish that are weakened by disease or are unhealthy due to pollution. Chinook and coho salmon in advanced stages of spawning are especially sensitive to the lampricide. Resident populations of stonecats and trout perch also are very sensitive to the chemical. In addition, any aquatic organisms, such as bait minnows, that are confined artifically in the stream water may be susceptible to the lampricide because of crowding and handling. Those who keep such organisms should consider using an alternate supply of water

during the treatment.

State fish and wildlife agencies are contacted prior to TFM treatments as are municipalities that use the streams as sources of potable water. Agricultural irrigators will also be notified and asked to suspend irrigation for a 24-hour period during and immediately after treatment. Some garden plants may be damaged or destroyed by TFM and should not be irrigated with water containing TFM. Plants in the cucumber family are especially sensitive.

The sea lamprey invaded Lake Ontario in the early 1800s, subsequently entering Lake Erie, via the Welland Canal, around 1921. Within a few decades, the lampreys infiltrated the Upper Great Lakes and severely reduced the number of lake trout and other fish species.

Before development of the lampricide and the control program, sea lampreys had virtually eliminated lake trout populations in the Great Lakes. The control program, initiated in 1956 by the Great Lakes Fishery Commission, was begun in tributaries of Lake Superior in 1958; Lake Michigan streams were first treated in 1960, followed by treatment of Lake Huron in 1961 and Lake Ontario in 1971. The treatment of Lake Erie streams did not commence until

Repeated treatment adult parasitic form.

Since the advent of lamprey control, lake trout populations have increased and are showing promise of becoming self-sustaining through natural reproduction, according to the Fish and Wildlife Service. Most of the lake trout planted in the Great Lakes are produced in Service

Sea lamprey control also benefits brook, brown and rainbow trout, and coho and chinook salmon planted in the lakes by the Departments of Natural Resources in states and provinces bordering the Great Lakes.

The Service emphasized that the fishery now enjoyed in the Great Lakes is dependent on sea lamprey control and would soon decline or disappear if the control program were discontinued.

tributaries to the Great Lakes are necessary for control because of the difficulty of eliminating adult lampreys in the Great Lakes. Adult lamprevs enter the streams to spawn, after which they die. The larvae they produce live in the stream bottom for several years. Later, as adults, they move into the lakes to prey on fish. The control program is designed to remove the larvae in the streams before they can grow into the

hatcheries.
